**Surface and Deep Histories** Anuradha Chatterjee, 2014-06-26 Surface in architecture has had a deeper and a more pervasive presence in the practice and theory of the discipline than is commonly supposed Orientations to the surface emerge collapse and reappear sustaining it as a legitimate theoretical and artefactual entity despite the twentieth century disciplinary definition of architecture as space structure and function Even though surface is defended for its pervasiveness Kurt Forster its function as a theoretical motif with generative power Andrew Benjamin and in constituting the operative principles of modern architecture as a visual phenomenon Mark Wigley it occupies the interstice or the space of the unconscious within architectural discourse from where it defends its legitimacy as architecturally valuable or functional as opposed to merely visually pleasurable Surface and Deep Histories positions surface within the scholarship of critical theory and design based approaches and invites academics and designers and art and architectural historians based in Australia to consider the uses figurations scales and typologies of surfaces The collection choreographs contributions that focus on a variety of topics such as montage and construction of colonial modernity and visual culture Molly Duggins wallpaper rational space and femininity Anna Daly the inter constituted nature of bodies clothes and cities Stella North the reconstruction of the urban surface through a true integration of information and topology M Hank Haeusler James Fergusson's theory of ornament Peter Kohane traditional and new verandahs in Australia Chris Brisbin contradictory effects of surface in Green architecture debates Flavia Marcello and Ian Woodcock and the thickness of thin curtain walls in contemporary Australian architecture Anuradha Chatterjee Surface and Deep Histories shows that surface is not thin spatially or conceptually It demonstrates that the practice of surface is simultaneously superficial and pervasive symbol and space meaningful and functional static and transitory and object and envelope

*In touch with the future* Alberto Gallace, Charles Spence, 2014-01-30 Out of all the human senses touch is the one that is most often unappreciated and undervalued Yet the surface of the human body the skin is actually one huge sheet of tactile receptors It provides us with the means to connect with our surroundings Despite the important role that vision plays in our everyday lives it is the skin that constitutes both the oldest and by far the largest of our sense organs The skin protects our body from the external world and at the same time informs us about what occurs on its surface In Touch With The Future explores the science of touch bringing together the latest findings from cognitive neuroscience about the processing of tactile information in humans The book provides a comprehensive overview of scientific knowledge regarding themes such as tactile memory tactile awareness consciousness tactile attention the role of

touch in interpersonal and sexual interactions and the neurological substrates of touch It highlights the many ways in which our growing understanding of the world of touch can and in some cases already are being applied in the real world in everything from the development of virtual reality VR environments tablet PCs mobile phones and even teledildonics the ultimate frontier in terms of adult entertainment In addition the book shows how the cognitive neuroscience approach to the study of touch can be applied to help improve the design of many real world applications products as well as to many of our everyday experiences such as those related to the appreciation of food marketing packaging design the development of enhanced sensory substitution systems art and man machine interfaces Crucially the authors makes a convincing argument for the view that one cannot really understand touch especially not in a real world context without placing it in a multisensory context That is the senses interact to influence tactile perception in everything from changing the feel of a surface or product by changing the sound it makes or the fragrance it has For students and researchers in the brain sciences this book presents a valuable and fascinating exploration into one of our least understood senses

tools they need to evaluate and select from the thousands of different materials that are available to them The book is organized into three sections Time looks at how the materials used in architectural design have changed over the years showing how we have come to use the materials we do in contemporary design Materials covers all five material families metals polymers ceramics composites and natural materials giving in depth information on their properties behavior origins and uses in design It also introduces a review of the cutting edge research for each family Systems outlines the technical design orientated research that uncovers how new architectural assemblies can be designed and engineered All of this practical advice is given along with many real case examples illustrating how this knowledge and information has been and can be used in architectural design

*The Inhabitable Flesh of Architecture* Marcos Cruz,2017-03-02 Today s architecture has failed the body with its long heritage of purity of form and aesthetic of cleanliness A resurgence of interest in flesh especially in art has led to a politics of abjection completely changing traditional aesthetics and is now giving light to an alternative discussion about the body in architecture This book is dedicated to a future vision of the body in architecture questioning the contemporary relationship between our Human Flesh and the changing Architectural Flesh Through the analysis and design of a variety of buildings and projects Flesh is proposed as a concept that extends the meaning of skin one of architecture s most fundamental metaphors It seeks to challenge a common misunderstanding of skin as a flat and thin surface In a time when a pervasive discourse about the impact of digital technologies risks turning the architectural skin ever more disembodied this book argues for a thick embodied flesh by exploring architectural interfaces that are truly inhabitable Different concepts of Flesh are investigated not only concerning the architectural and aesthetic but also the biological aspects The latter is materialised in form of Synthetic Neoplasms which are proposed as new semi living entities rather than more commonly derived from scaled up analogies between biological systems and larger scale architectural constructs These neoplastic creations are identified as partly designed object and partly living material in which the line between the natural and the artificial is progressively blurred Hybrid technologies and interdisciplinary work methodologies are thus required and lead to a revision of our current architectural practice
