The Intrinsic Value Of Naturevalue Inquiry Series 59:

Socially-critical Environmental Education in Primary Classrooms Jane Edwards, 2015-10-26 The effectiveness of Education for Sustainable Development depends on the ability of schools and teachers to embrace pedagogies that reduce the gap between the rhetoric of education for the environment and the reality of classroom practices This book responds to the need to better understand the nature of the relationships between agency and structure that contribute to the development of educational rhetoric reality gaps in order to inform processes that most effectively facilitate pedagogical change This book explores the issues of pedagogical change through the experiences of Australian primary school teachers faced with the challenge of implementing an environmental education program in which young students were positioned as active participants in the social processes from which environmentally sustainable practices could be developed These teachers were required to adopt pedagogies that often represented the antithesis of their well established teacher directed approaches Through the use of Anthony Giddens Theory of Structuration this book provides unique perspectives of the teacher mediated manner in which certain elements of structure and agency interrelate to enable and constrain classroom practices essential understandings for school principals and educational policy developers who aim to effectively implement pedagogical change This book also demonstrates that the Theory of Structuration provides a valuable ontological research framework and provides social researchers with practical guidance for how to relate this theory to specific research issues

The Moral Circle Jeff Sebo, 2025-01-28 A philosopher calls for a revolution in ethics suggesting we expand our moral circle to include insects AI systems and even microbes Today human exceptionalism is the norm Despite occasional nods to animal welfare we prioritize humanity often neglecting the welfare of a vast number of beings As a result we use hundreds of billions of vertebrates and trillions of invertebrates every year for a variety of purposes often unnecessarily We also plan to use animals AI systems and other nonhumans at even higher levels in the future Yet as the dominant species humanity has a responsibility to ask Which nonhumans matter how much do they matter and what do we owe them in a world reshaped by human activity and technology In *The Moral Circle* philosopher Jeff Sebo challenges us to include all potentially significant beings in our moral community with transformative implications for our lives and societies This book explores provocative case studies such as lawsuits over captive elephants and debates over factory farmed insects and compels us to consider future ethical quandaries such as whether to send microbes to new planets and whether to create virtual worlds filled with digital minds Taking an expansive view of human responsibility Sebo argues that building a positive future requires the shedding of human exceptionalism and radically rethinking our place in the world **Global Soil Security: Towards More**

Baird Callicott, John O'Neill, Barry Smith, 1992 Recent Work on Intrinsic Value Toni Rønnow-Rasmussen, Michael J. Zimmerman, 2006-02-15 Recent Work on Intrinsic Value brings together for the first time many of the most important and influential writings on the topic of intrinsic value to have appeared in the last half century During this period inquiry into the nature of intrinsic value has intensified to such an extent that at the moment it is one of the hottest topics in the field of theoretical ethics The contributions to this volume have been selected in such a way that all of the fundamental questions concerning the nature of intrinsic value are treated in depth and from a variety of viewpoints These questions include how to understand the concept of intrinsic value what sorts of things can have intrinsic value and how to compute intrinsic value The editors have added an introduction that ties these questions together and places the contributions in context and they have also provided an extensive bibliography The result is a comprehensive balanced and detailed picture of current thinking about intrinsic value one that provides an indispensable backdrop against which future writings on the topic may be assessed **General Topic: The Intrinsic Value of Nature** Barry Smith, 1992 *Life's Intrinsic Value* Nicholas Agar, 2001 Are bacteriophage T4 and the long nosed elephant fish valuable in their own right Agar defends an affirmative answer to this question by arguing that anything living is intrinsically valuable The result is a challenge to prevailing definitions of value and a call for a scientifically informed appreciation of nature **The Varieties of**
