Mathematics (Education) in the Information Age Stacy A. Costa, Marcel Danesi, Dragana Martinovic, 2020-12-10 This book brings together ideas from experts in cognitive science mathematics and mathematics education to discuss these issues and to present research on how mathematics and its learning and teaching are evolving in the Information Age Given the ever broadening trends in Artificial Intelligence and the processing of information generally the aim is to assess their implications for how math is evolving and how math should now be taught to a generation that has been reared in the Information Age It will also look at the ever spreading assumption that human intelligence may not be unique an idea that dovetails with current philosophies of mind such as posthumanism and transhumanism The role of technology in human evolution has become critical in the contemporary world Therefore a subgoal of this book is to illuminate how humans now use their sophisticated technologies to chart cognitive and social progress Given the interdisciplinary nature of the chapters this will be of interest to all kinds of readers from mathematicians themselves working increasingly with computer scientists to cognitive scientists who carry out research on mathematics cognition and teachers of mathematics in a classroom

Poetry in the Digital Age Claudia Benthien, Vadim Keylin, Henrik Wehmeier, 2025-10-14 As a multifaceted and intermedial phenomenon poetry in the digital age not only demands a rethinking and expansion of the traditional paradigms of literary studies but also attracts increasing attention from other humanities This interdisciplinary handbook is thus addressed both to literary scholars and to the broadest academic audience interested in contemporary poetry research It offers 50 contributions by an international collective of authors that highlight the diversity of contemporary poetry examining it from a wide variety of complementing theoretical and methodological angles The handbook focuses on contemporary modes of poetry presentation that are often located beyond the book e.g. on stages in public spaces as multi as well as transmedia publications or on digital platforms Such intermedial poetic practices which may supplement poetic language with elements borrowed from music visual art cinema or theater and performance are transforming the forms and functions of poetry It four parts thus 1 adapt established concepts and parameters of poetry research to the digital age 2 explore established genres and emerging formats 3 introduce interdisciplinary perspectives and

new research fields and 4 engage in current debates

The Translation Zone Emily Apter, 2011-10-16 Translation before 9 11 was deemed primarily an instrument of international relations business education and culture Today it seems more than ever a matter of war and peace In *The Translation Zone* Emily Apter argues that the field of translation studies habitually confined to a framework of linguistic fidelity to an original is ripe for expansion as the basis for a new comparative literature Organized around a series of propositions that range from the idea that nothing is translatable to the idea that everything is translatable *The Translation Zone* examines the vital role of translation studies in the invention of comparative literature as a discipline Apter emphasizes language wars including the role of mistranslation in the art of war linguistic incommensurability in translation studies the tension between textual and cultural translation the role of translation in shaping a global literary canon the resistance to Anglophone dominance and the impact of translation technologies on the very notion of how translation is defined The book speaks to a range of disciplines and spans the globe Ultimately *The Translation Zone* maintains that a new comparative literature must take stock of the political impact of translation technologies on the definition of foreign or symbolic languages in the humanities while recognizing the complexity of language politics in a world at once more monolingual and more multilingual

wiring of Chomsky's Language Acquisition Device In addition Logan shows how according to this model culture itself can be treated as an organism that has evolved to be easily attained revealing the universality of human culture as well as providing an insight as to how altruism might have originated Bringing timely insights to a fascinating field of inquiry The Extended Mind will be sure to find a wide readership [A Topology of Mind](#) Robert K. The Information Animal Alicia Wanless, 2025-05-22 Depending on the news you read new tools like AI will either save or destroy us But our response to emerging technology's unprecedented threats actually follows a pattern as old as civilisation From ancient Athens to COVID 19 social media to spam Alicia Wanless shows how humans have always consumed information whether accurate or not First a new technology changes how information is shared broadening its availability and accelerating how fast it travels Then as more people engage with this new content fresh ideas arise often challenging prevailing beliefs Some use the new tools to promote their views win power or simply profit adding to the mounting information pollution Competition and conflict follow We scramble in vain to control information flows and use

of the new technology With democracies worldwide lurching from crisis to crisis knee jerk reactions to information conflict won't suffice What's needed is an understanding of our nature as information animals in a millennia long relationship with technology and of how a content saturated world impacts the political battle for hearts and minds **Rhetorical**

Samuel A. Navarro Ortega, 2017-01-28 This book presents a novel analysis of the learning of motion event descriptions by Anglophone students of Spanish The author examines cross linguistic differences between English and Spanish focusing on the verbal patterns of motion events to explore how learners overcome an entrenched first language preference to move toward the lexicalization pattern of the additional language His findings highlight the gradual nonlinear process Anglophones traverse to acquire and produce form meaning mappings describing motion in Spanish The author suggests that as motion event descriptions are not normally the focus of explicit instruction students learn this concept primarily from exposure to Spanish Given its interdisciplinary nature this book will be of interest to researchers working in Hispanic linguistics cognitive
