science no stone has been left unturned , *Stochastic Population Dynamics in Ecology and Conservation* Russell Lande,Steinar Engen,Bernt-Erik Sæther,2003 All populations fluctuate stochastically creating a risk of extinction that does not exist in deterministic models with fundamental consequences for both pure and applied ecology This book provides the most comprehensive introduction to stochastic population dynamics combining classical background material with a variety of modern approaches including new and previously unpublished results by the authors illustrated with examples from bird and mammal populations and insect communities Demographic and environmental stochasticity are introduced with statistical methods for estimating them from field data The long run growth rate of a population is explained and extended to include age structure with both deomgraphic and environmental stochasticity Diffusion approximations facilitate the analysis of extinction dynamics and the duration of the final decline Methods are developed for estimating delayed density dependence from population time series using life history data Metapopulation viability and the spatial scale of population fluctuations and extinction risk are analyzed Stochastic dynamics and statistical uncertainty in population parameters are incorporated in Population Viability Analysis and strategies for sustainable harvesting Statistics of species diversity measures and species abundance distributions are described with implications for rapid assessments of biodiversity and methods are developed for partitioning species diversity into additive components Analysis of the stochastic dynamics of a tropical butterfly community in space and time indicates that most of the variance in the species abundance distribution is due to ecological heterogeneity among species so that real communities are far from neutral

**Landscapes and Landforms of Slovakia** Milan Lehotský,Martin Boltžiar,2022-04-11 Landscapes and Landforms of the

Slovakia provides an attractive physiographical overview of the most prominent landscapes of Slovakia and the distinctive landforms associated with them. It describes the main driving factors leading to their evolution and importance for geoconservation and geotourism. The richly illustrated book provides the reader with enjoyable and informative descriptions of the selected sites within their regional geographical and geological settings. Range from the Tatras Mts with glacially shaped relief as the highest region in the Carpathians to caves and lowlands taking into account fluvial gravity induced karst and structural landscapes of the Slovakia. The book is organized in 3 parts: a Introduction which presents a general framework of the physical geography of Slovakia; b Geomorphological landscapes presenting papers dealing with key geomorphological areas resp landforms; c Geoheritage and landscape protection providing an updated vision on the geomorphological geological heritage sites and landscape protection policy in Slovakia. The book will be relevant to scientists, scholars and any readers interested in geomorphology, geology, physical geography, geoheritage, landscape tourism and environmental protection. It can be also used for undergraduate and graduate courses in Earth and environmental sciences.

**Science and Skiing** E. Kornexl, E. Muller, C. Raschner, H. Schwameder, 2003-09-02. The first International Congress on Science and Skiing was held in Austria in January 1996. The main aim of the conference was to bring together original key research in this area and provide an essential update for those in the field. The link between theory and practice was also addressed, making the research more applicable for both researchers and coaches. This book is divided into five parts, each containing a group of papers that are related by theme or disciplinary approach. They are as follows: Biomechanics of Skiing, Fitness testing and Training in Skiing, Movement Control and Psychology in Skiing, Physiology of Skiing and Sociology of Skiing. The conclusions drawn from the conference represent an invaluable practical reference for sports scientists, coached skiers and all those involved in this area. *Geographia Polonica*, 1979. **Harper's Weekly** John Bonner, George William Curtis, Henry Mills Alden, Samuel Stillman Conant, Montgomery Schuyler, John Foord, Richard Harding Davis, Carl Schurz, Henry Loomis Nelson, John Kendrick Bangs, George Brinton McClellan Harvey, Norman Hapgood, 1894. Slope Development Anthony Young, Doreen M. Young, 1983. *Landscapes and Landforms of England and Wales* Andrew Goudie, Piotr Migoń, 2020-05-10. This book presents the geomorphological diversity of England and Wales. These regions are characterised by an extraordinary range of landforms and landscapes reflecting both the occurrence of many different rock types and drastic climatic changes over the last few million years, including ice sheet expansion and decay. The book begins by providing the geological and geomorphological context needed in order to understand this diversity in a relatively small area. In turn, it presents nearly thirty case studies on specific landscapes and landforms, all of which are landmarks in the territory discussed. These include the famous coastal cliffs and landslides, granite tors of Dartmoor, formerly glaciated mountains of Snowdonia and the Lake District karst of Yorkshire and many others. The geomorphology of London and the Thames is also included. Providing a unique reference guide to the geomorphology of England and Wales, the book is lavishly

illustrated with diagrams colour maps and photos and written in an easy to read style The contributing authors are distinguished geomorphologists with extensive experience in research writing and communicating science to the public The book will not only be of interest to geoscientists but will also benefit specialists in landscape research geoconservation tourism and environmental protection
