places public sanitation in a global context and provides a definitive discussion of current state of the art sanitation technologies. It shows how these technologies can be implemented to integrate domestic waste and wastewater treatment in order to maximize resource recycling in domestic practice. Decentralised Sanitation and Reuse presents technical solutions for on site collection and transport of concentrated waste streams and focuses on the compromise between reliability and minimal water wastage. A whole range of available sustainable technologies both low and high tech to treat concentrated black water and diluted grey water streams are addressed in detail from the fundamental scientific and engineering points of view. Sociological, economic and particularly environmental and public health aspects are essential issues within this book. The necessity of new infrastructure implementation and the resulting challenges for a good number of economic branches are illustrated with examples from architecture and town planning. Decentralised Sanitation and Reuse will be an invaluable resource for a wide academic and professional readership active in the fields of environmental protection and public sanitation.
