Smart Material Systems Model Development:

Smart Material Systems Ralph C. Smith, 2005-03-01 This book describes several novel applications currently under investigation that exploit the unique actuator and sensor capabilities of smart material compounds. In addition to present and projected applications, this book provides comprehensive coverage of both linear and nonlinear modeling techniques necessary to characterize materials in a manner that facilitates transducer design and control development. The author focuses on ferroelectric, magnetic and shape memory compounds and also addresses applications exploiting amorphous and ionic polymers, magnetorheological compounds and fiber optic sensors. By providing a unified treatment of both linear and nonlinear characterization frameworks, *Smart Material Systems Model Development* encompasses both low to moderate drive levels which constitute the primary focus of most present texts and the high drive regimes dictated by present and future applications. This will significantly enhance the design of transducers and control systems which exploit the unique actuator and sensor capabilities provided by smart material compounds.

Engineering Analysis of Smart Material Systems Donald J. Leo, 2007-09-10 The book provides a pedagogical approach that emphasizes the physical processes of active materials and the design and control of engineering systems. It will also be a reference text for practicing engineers who might understand the basic principles of active materials but have an interest in learning more about specific applications. The text includes a number of worked examples, design problems and homework problems with a solutions manual that will be useful for both instructors and practicing engineers.
