Sprawl And Suburbia William S. Saunders, Sprawl is the single most significant and urgent issue in American land use at the turn of the twenty first century Efforts to limit and reform sprawl through legislative Smart Growth initiatives have been enacted around the country while the neotraditionalist New Urbanism has been embraced by many architects and urban planners Yet most Americans persist in their desire to live farther and farther away from urban centers moving to exurbs made up almost entirely of single family residential houses and stand alone shopping areas Sprawl and Suburbia brings together some of the foremost thinkers in the field to present in depth diagnosis and critical analysis of the physical and social realities of exurban sprawl Along with an introduction by Robert Fishman these essays call for architects urban planners and landscape designers to work at mitigating the impact of sprawl on land and resources and improving the residential and commercial built environment as a whole In place of vast residential exurbs these writers offer visions of a fresh urbanism appealing and persuasive models of life at greater density with greater diversity and within genuine communities With sprawl losing the support of suburban citizens themselves as economic environmental and social costs are being paid Sprawl and Suburbia appears at a moment when design might achieve some critical influence over development if architects and planners accept the challenge Contributors Mike Davis Ellen Dunham Jones Peter Hall David Harvey Jerold S Kayden Matthew J Kiefer Alex Krieger Andrew Ross James S Russell Mitchell Schwarzer William S Saunders is editor of Harvard Design Magazine and assistant dean for external relations at the Harvard Design School He is the author of Modern Architecture Photographs by Ezra Stoller Robert Fishman is professor of architecture and urban planning at the Taubman College of Architecture University of Michigan He is author of Bourgeois Utopias The Rise and Fall of Suburbia and editor of The American Planning Tradition Culture and Policy

Growth Management and Affordable Housing Anthony Downs, 2004-06-15 Advocates of growth management and smart growth often propose policies that raise housing prices thereby making housing less affordable to many households trying to buy or rent homes Such policies include urban growth boundaries zoning restrictions on multi family housing utility district lines building permit caps and even construction moratoria Does this mean there is an inherent conflict between growth management and smart growth on the one hand and creating more affordable housing on the other Or can growth management and smart growth promote policies that help increase the supply of affordable housing These issues are critical

to the future of affordable housing because so many local communities are adopting various forms of growth management or smart growth in response to growth related problems Those problems include rising traffic congestion the absorption of open space by new subdivisions and higher taxes to pay for new infrastructures This book explores the relationship between growth management and smart growth and affordable housing in depth It draws from material presented at a symposium on these subjects held at the Brookings Institution in May 2003 sponsored by the U S Department of Housing and Urban Development the National Association of Realtors and the Fannie Mae Foundation Contributors seek to inform the debate and provide some useful answers to help the nation accommodate the curtailment of growth in urban and suburban domains while still ensuring a supply of affordable housing Contributors include Karen Destorel Brown Brookings Robert Burchell Rutgers University Daniel Carlson University of Washington David L Crawford Econsult Corporation Anthony Downs Brookings Ingrid Gould Ellen New York University William Fischel Dartmouth College George C Galster Wayne State University Jill Khadduri Abt Associates Gerrit J Knaap University of Maryland Robert Lang Virginia Polytechnic

Towards Sustainable Cities Peter J. Marcotullio, 2017-09-08 While there has been much recent research into achieving sustainability in urban areas most of this is specific to a particular region This volume broadens these discussions by extending the analysis from North American and European cities to include East Asian cities Many cities in Asia have deep historical roots have sustained dense populations through time and have grown prosperous in recent decades They also face significant environmental degradation and other planning challenges In bringing together and comparing strategies and experiences from three distinct global regions this book offers unique insights and new perspectives on the challenges of moving towards greater urban sustainability While questioning which strategies can promote sustainable cities in a global context the book also illustrates that while formulae generated out of American and European experience cannot be universally applied some of the analytical approaches and experience of the other developed countries can offer insights for those working in different contexts It argues that managing urban change for greater urban sustainability in diverse regions requires detailed understanding of local issues and regional strategies as well as strong support from local communities
