Student Turns Professor Craig P. Boulton, 2001-08-23 The book is a collection of nine papers on disparate topics in finance and economics Topics range from the development of a supply and demand model for common stocks to the centuries old conflict between mercantilism and liberal trade regimes One essay goes to great length in critiquing the conventional notion that inflation solely derives from monetary policy using the past 30 years as an illustrative example Throughout the text the author continually attempts to merge the world of finance with that of economics while coupling both with historical

experience The author additionally brings his own long standing practical experience in the financial markets to point out where academic wisdom doesn't quite mesh with market realities The collective contents in conjunction with other work resulted in the author being elected to Beta Gamma Sigma the business school equivalent of Phi Beta Kappa Since the author is first and foremost a pragmatic investor his perspective on financial and economic theory is generally focused on their practical application which was the genesis behind the approach taken in writing this book's contents Market Timing with Moving Averages Valeriy Zakamulin, 2017-11-17 This book provides a comprehensive guide to market timing using moving averages Part I explores the foundations of market timing rules presenting a methodology for examining how the value of a trading indicator is computed Using this methodology the author then applies the computation of trading indicators to a variety of market timing rules to analyse the commonalities and differences between the rules Part II goes on to present a comprehensive analysis of the empirical performance of trading rules based on moving averages

Measuring Information Technology Investment Payoff Mo Adam Mahmood, Edward J. Szewczak, 1999-01-01 It would seem that business investment in information technology IT is at root no different from business investment in anything else After a careful consideration of the costs of the investment and its anticipated benefits a decision is made as to whether the benefits of the investment outstrip the costs and by how much If the benefits are competitive with other investment alternatives say a major marketing campaign then the business will commit financial resources to the IT proposal Otherwise it won't This decision making process is at the heart of capital budgeting Senior executives have been making IT investment decisions for well over three decades So why is the measurement of IT investment payoff so difficult and controversial Why do we need a book dealing with contemporary approaches to measuring IT investment payoff Why have earlier approaches to measuring IT investment payoff proven unsatisfactory In what respects have earlier approaches fallen short Do we need to scrap earlier approaches entirely or can we find important improvements to these approaches such that they can be newly applied to effectively measure IT investment payoff in ways that are convincing to senior management This book will help you to find improvements in existing methods for measuring IT investment payoff as well as to find new innovative methods for addressing the value of emerging IT 0000 0
