Smoking and Reproduction Ernest L. Abel, 1982-12-20 Product information not available **Smoking and Reproductive Health** Michael J. Rosenberg, 1987 **Epidemiology of Human Reproduction** Bengt Kallen, 1988-09-30

This comprehensive overview covering the field of reproductive epidemiology examines the impact of environmental factors related to embryonic and fetal development. Innovative techniques are highlighted illustrating special problems related to reproductive epidemiology. Specific environmental risks are addressed separately concluding with a chapter on risk assessment and information problems. Throughout the text is supported with over 70 illustrations of new findings never before published. This is an invaluable resource for scientists in the field of reproductive epidemiology. Textbook of Assisted Reproductive Techniques David K. Gardner, Ariel Weissman, Colin M. Howles, Zeev Shoham, 2017-11-09

Already established as a classic comprehensive reference for the whole team at the IVF clinic this new edition has been extensively revised with the addition of several important new contributions on laboratory including advanced sperm selection techniques for ICSI human embryo biopsy procedures oocyte activation managing an oocyte bank artificial gametes and epigenetics as well as on clinical topics including GnRH agonist triggering segmentation of IVF treatment uterus transplantation and risk and safety management. As previously methods protocols and techniques of choice are presented by eminent contributors internationally.

Analyzing Male Reproductive Risk, Understanding Molecular Targets, and Developing Treatments Xiang Xiao, Cibele S. Borges, Huitao Li, C. Yan Cheng, 2024-07-10

Male fertility both resilient and fragile is heavily affected by external factors such as the environment drug use and eating habits in a similar way to a wall of stone that is constantly attacked and weathered to varying degrees. The use of cancer drugs for instance may increase life expectancy and cure diseases but may also negatively affect male fertility. A variety of factors complicate male infertility such as the intricate spermatogenesis process. The available methods for diagnosis are limited not to mention treatment. However some evidence showed that different reproductive physiologies may share some biological basis and thus molecular pathways such as mTOR which plays a role in testis physiology Sertoli cell function transcriptional and translational control of spermatogenesis as well as drug and environmental exposure. Moreover male fertility can also reflect men's overall health and the likelihood of suffering from certain diseases suggesting that these events have common regulatory mechanisms. This Research Topic aims to identify these potential shared mechanisms analyze and explore how environment disease drug use and nutritional supplements affect male fertility as well as reveal the seemingly chaotic but traceable phenomena. It will be crucial for the development of diagnostics treatments and maintenance methods needed to enhance male fertility which is also the objective of this research topic. This Research Topic encourages Original Research Reviews and other accepted article types including but not limited to Analyses of the possible effects of environmental pollutants brought about by industry and human activities such as endocrine disrupting chemicals EDCs on male reproduction. Links between men's

overall health and fertility as well as andrological effects of various illnesses including infectious diseases deficiencies hereditary diseases and physiological disorders Effects of medications and dietary supplements on male reproductive systems such as those used for cancer treatment psychiatric disorders diabetes etc The use of herbal and medicinal remedies to prevent or reverse adverse andrological effects caused by putative toxic chemicals and diseases Specific molecular mechanisms and signalling pathways that affect spermatogenesis the testis and sperm function associated with the above 4 points Shared molecular mechanisms underlying both the generation and remission of male infertility disease Textbook of Assisted Reproductive Techniques Ariel Weissman, Colin M. Howles, Zeev Shoham, 2017-12-15 Established as a definitive reference for the IVF clinic the fifth edition has been extensively revised with the addition of several important new contributions on clinical topics including GnRH agonist triggering segmentation of IVF treatment uterus transplantation and risk and safety management As previously methods protocols and techniques of choice are presented by IVF pioneers and eminent international experts *Environment and Female Reproductive Health* Huidong Zhang, Jie Yan, 2021-02-01 This book will focus on the harmful effect of environmental toxins on female reproductive health Reproduction is the basis of the continuation of human beings and environment is the basis of human survival However environmental pollution has become a potential risk factor for human reproductive health which not only leads to many chronic diseases but also causes certain harm to reproductive health Compared to male reproduction female reproductive process is more complex the reproductive system is more fragile and is more vulnerable to be damaged The aim of this book is to review the research progress to address the challenges and to stimulate the development in the direction of environment and female reproductive health
