is an obvious essential starting point for this series of publications The need to discriminate between objective observations and theoretical constructs and to design scientifically valid experiments is vital to progress in understanding early infant behavior It is easy to misinterpret apparent responses to interventions especially in infants at biological risk Preterm infants and their caretakers are particularly challenging as subjects but very difficult to assess scientifically The interactions between mother and newborn and father and newborn hold promise of substantial additional insights into the development of behavior Thus this volume provides interesting perspectives into the relationship of the evolving immature neurological system to complex behavior patterns in newborn infants which raise many new questions and exciting opportunities to extend our very limited knowledge about the newborn infant's psychosocial emotional and cognitive development RICHARD E BEHRMAN M D
