Prolog Leon Sterling, 1986 Prolog: The Next 50 Years David S. Warren, Veronica Dahl, Thomas Eiter, Manuel V.

Hermenegildo, Robert Kowalski, Francesca Rossi, 2023-06-16 This volume was motivated by the Year of Prolog initiative launched to celebrate the 50th anniversary of the emergence of Prolog through the work of Alain Colmerauer's team in Marseille The volume editors authors and scientific advisors and reviewers have been the leading researchers and programmers in this field over decades and the book represents an excellent overview of the field its successes and its future After a first chapter that gently introduces the Prolog programming language using examples the next 7 papers discuss general views of the language possible extensions for the future and how Prolog can generally be used to solve problems the next 5 papers explore ideas and experiences of teaching Prolog programming and then 2 papers discuss technology that has been developed for help in that teaching the next 3 papers describe new languages based on Prolog which show future directions for logic programming the next 5 chapters explain the applications that were the finalists for the 2022 Alain Colmerauer Prize and the final 8 papers describe applications developed using the Prolog language demonstrating the language's range *Practical Aspects of Declarative Languages* Gopal Gupta, 2003-05-20 Declarative languages have traditionally been regarded by the mainstream computing community as too impractical to be put to practical use At the same time traditional conferences devoted to declarative languages do not have issues related to practice as their central focus Thus there are few forums devoted to discussion of practical aspects and implications of newly discovered results and techniques related to declarative languages The goal of the First International Workshop on Practical Aspects of Declarative Languages PADL is to bring together researchers practitioners and implementors of declarative languages to discuss practical issues and practical implications of their research results The workshop was held in San Antonio Texas during January 18 19 1999 This volume contains its proceedings Fifty three papers were submitted in response to the call for papers These papers were written by authors belonging to twenty one countries from six continents Each paper was assigned to at least two referees for reviewing Twenty four papers were finally selected for presentation at the workshop Many good papers could not be included due to the limited duration of the workshop The workshop included invited talks by Mark Hayden of DEC Compaq Systems Research Center speaking on Experiences Building Distributed Systems in ML and Mark Wallace of Imperial College Center for Planning and Resource Control IC PARC speaking on ECLiPSe Declarative Specification and Scalable Implementation

concepts offering a detailed exploration into Prolog's advanced constructs. From sophisticated data structures and metaprogramming techniques to integrative methods that connect Prolog with other languages, this book provides the tools necessary to harness the full potential of Prolog in solving real-world problems. Each chapter meticulously covers key themes such as constraint logic programming, optimization strategies, and the nuanced intricacies of concurrent and parallel design. Our carefully curated content ensures that readers develop a deep practical understanding of how to use Prolog effectively across diverse domains including artificial intelligence, big data management, and high performance computing. This text is rich with insights guiding professionals through the intricacies of writing efficient, scalable, and robust Prolog applications. Mastering the Art of Prolog Programming is not only a testament to the language's versatility and power but also a definitive guide for unlocking creativity and innovation in programming. Through its factual, structured approach, this book empowers you to transform complex challenges into elegant solutions, utilizing the sophisticated capabilities of Prolog. Whether you are developing advanced algorithms or crafting intelligent systems, this book is your key to proficiency and success in the realm of logic programming.

Microcomputer Applications, 1990 **Choice**, 1987 **Sorts and Types in Artificial Intelligence**, 1990

The aim of this book is to reflect the substantial research done in Artificial Intelligence on sorts and types. The main contributions come from knowledge representation and theorem proving, and important impulses come from the application areas, i.e. natural language understanding systems, computational linguistics, and logic programming. The workshop brought together researchers from logic, theoretical computer science, theorem proving, knowledge representation, linguistics, logic programming, and qualitative reasoning. Publisher's website *XSPER--an Approach for Generating Extensible Integrated Project Support Environments*, Richard Lawrence Randall, 1989 *Eco-logic*, David Robertson, 1991

In *Eco-Logic*, the authors describe an alternative approach, one that views simulation models as logical statements. *Putting Expert Systems Into Practice*, Robert G. Bowerman, David E. Glover, 1988

This book discusses strategies and tactics for creating robust production applications. It addresses those general principles for success that will not become outdated as new products are released and application areas expand. Strategies and guidelines are emphasized rather than extensive documentation of existing implementations. The discussion includes a broad analysis of leading and emergent shell tools, tool sets, environments, and symbolic programming languages within the context of examining generic expert system development tool features.

The Spang Robinson Report, 1987 **Artificial Intelligence**, George F. Luger, William A. Stubblefield, 1993

Written by a leading international consultant in AI, this book delivers a balanced and comprehensive introduction to both the principles and practical applications of Artificial Intelligence. The discussion of AI theory and development is richly illustrated with AI solutions presented in three languages: CLOS, LISP, and PROLOG.
