## **Small Office Building Handbook Design For Reducing First Costs Utility Costs:**

*Small Office Building Handbook* Burt Hill Kosar Rittelmann Associates, 1985-01-01      Proceedings of the Solar Buildings Conference March 18-20, 1985, Washington D.C., 1985      *Fundamentals of Building Energy Dynamics* Bruce D. Hunn, 1996

*Fundamentals of Building Energy Dynamics* assesses how and why buildings use energy and how energy use and peak demand can be reduced. It provides a basis for integrating energy efficiency and solar approaches in ways that will allow building owners and designers to balance the need to minimize initial costs, operating costs and life cycle costs with need to maintain reliable building operations and enhance environmental quality both inside and outside the building. Chapters trace the development of building energy systems and analyze the demand side of solar applications as a means for determining what portion of a building's energy requirements can potentially be met by solar energy. Following the introduction, the book provides an overview of energy use patterns in the aggregate U.S. building population. Chapter 3 surveys work on the energy flows in an individual building and shows how these flows interact to influence overall energy use. Chapter 4 presents the analytical methods, techniques and tools developed to calculate and analyze energy use in buildings, while chapter 5 provides an extensive survey of the energy conservation and management strategies developed in the post energy crisis period. The approach taken is a commonsensical one, starting with the proposition that the purpose of buildings is to house human activities and that conservation measures that negatively affect such activities are based on false economies. The goal is to determine rational strategies for the design of new buildings and the retrofit of existing buildings to bring them up to modern standards of energy use. The energy flows examined are both large scale heating systems and small scale choices among appliances. *Solar Heat Technologies Fundamentals and Applications Volume 4      Heating and Cooling of Buildings* Jan F. Kreider, Peter S. Curtiss, Ari Rabl, 2009-12-28. The art and the science of building systems design evolve continuously as designers, practitioners and researchers all endeavor to improve the performance of buildings and the comfort and productivity of their occupants. Retaining coverage from the original second edition while updating the information in electronic form, *Heating and Cooling of Buildings Design for Efficiency Revised Second Edition* presents the technical basis for designing the lighting and mechanical systems of buildings. Along with numerous homework problems, the revised second edition offers a full chapter on economic analysis and optimization, new heating and cooling load procedures and databases and simplified procedures for ground coupled heat transfer calculations. The accompanying CD-ROM contains an updated version of the *Heating and Cooling of Buildings HCB* software program as well as electronic appendices that include over 1 000 tables in HTML format that can be searched by major categories, a table list or an index of topics. Ancillary information is available on the book's website [www.hcbcentral.com](http://www.hcbcentral.com). From materials to computers, this edition explores the latest technologies exerting a profound effect on the design and operation of buildings. Emphasizing design optimization and critical thinking, the book continues to be the ultimate resource for understanding energy use in buildings.      **Heating and Cooling**
