Human-in-the-Loop Simulations Ling Rothrock, S. Narayanan, 2011-09-15 *Human in the Loop Simulations* is a compilation of articles from experts in the design development and use of human in the loop simulations. The first section of the handbook consists of papers on fundamental concepts in human in the loop simulations such as object oriented simulation development, interface design and development and performance measurement. The second section includes papers from researchers who utilized HITL simulations to inform models of cognitive processes to include decision making and metacognition. The last section describes human in the loop processes for complex simulation models in trade space exploration and epidemiological analyses. *Human in the Loop Simulations* is a useful tool for multiple audiences including graduate students and researchers in engineering and computer science.

Principles of Synthetic Intelligence PSI: An Architecture of Motivated Cognition Joscha Bach, 2009-04-06 This title features chapters on machines to explain the mind, Damer's blueprint for a mind, representation of and for mental processes, language and future avenues from PSI to microPSI and much more.

Causal Learning Alison Gopnik, Laura Schulz, 2007-03-22 *Causal Learning* provides a compendium of research determining how in principle the problem of causal inference and learning can be solved and a wealth of methods for determining how it is in fact solved by children, adults and animals. This is the first book to bring together leading researchers carrying out this new research in all these areas of cognitive science. The chapters focus on three topics: the role of intervention and action in causal understanding, the role of causation in categories and concepts, and the relationship between causal learning and intuitive theory formation. The book provides an accessible and clear introduction to the new computational ideas and with many coauthored chapters and much interaction between the chapters, it presents an active dialogue among the authors.

Ambient Intelligence Emile H.L. Aarts, James L. Crowley, Heinz Gerhäuser, Alexander Pflaum, Janina Schmidt, Reiner Wichert, 2008-11-14 This volume contains the proceedings of the Second European Ambient Intelligence AmI Conference. The conference took place in Erlangen and Nürnberg, November 19-22, 2008. The concept of ambient intelligence AmI was introduced in the late 1990s as a novel paradigm for electronic environments for the years 2010-2020. It builds on the early visions of Weiser describing a novel mobile computing infrastructure integrated into the networked environment of people. According to early definitions, AmI refers to smart electronic surroundings that are sensitive and responsive to the presence of people. The added value for the multi-dimensional society we are living in lies in the fact that the large-scale integration of microelectronics into the environment enables people and objects to interact with this environment in a seamless, trustworthy and natural manner. Obviously, AmI solutions deliver a new quality of communication and information exchange: they help people to fulfill their professional tasks with increasing efficiency, enable the older generation to stay much longer in the privacy of their own homes, and the younger one to lead a healthy and responsible life. Smart mobile devices navigate in private apartments as well as in complex public or industrial environments in order to support people with a broad variety of
