Creative Destruction Raul Luciano Katz,2002 Schumpeter s framework of creative destruction applied to the rapidly changing telecommunications and related Internet industries More than fifty years ago Joseph Schumpeter stated that processes intrinsic to a capitalist society produce a creative destruction whereby innovations destroy obsolete technologies only to be assaulted in turn by newer and more efficient rivals This book asks whether the current chaotic state of the

telecommunications and related Internet industries is evidence of creative destruction or simply a result of firms governments and others wasting valuable resources with limited benefits to society as a whole In telecommunications for example wireless IP and cable based technologies are all fighting for a share of the market currently dominated by older circuit switched copper terminated networks This process is accompanied by mergers acquisitions bankruptcies and investment and divestment in worldwide markets The selections discuss the primary challenge facing firms governments and other players how to exploit the opportunities created by such destructive dynamics They highlight the importance of national regulations promoting competition and nonmonopolistic market structures as well as the role of new technologies such as the Internet in driving down the price and speeding the diffusion of innovative products and services in telecommunications media electronic retailing and other new economy industries

Innovation and Institutions Steven Casper, Frans van Waarden, 2005-01-01 The idea behind this book is that institutions are important when it comes to explaining the specialisation and performance of national innovation systems The idea is not new But largely the institution concept has remained somewhat vague and unspecified in the literature This book is valuable since it succeeds in opening up the black box of institutions and organisations The distinction between institutions at different levels and how they link up and form a systemic whole is especially original and fruitful The interdisciplinary team behind the book has also produced a welcome antidote to the current tendency to benchmark innovation systems exclusively on the basis of quantitative indicators The analysis demonstrates that some national systems do better in some specific areas because of being supported by institutions that are sometimes deeply rooted in history and culture This is why imitating best practice across countries is not a straight forward thing to do Bengt ke Lundvall Aalborg University Denmark

Innovation and Institutions is an extensive elaboration on the make up of systems of innovation It examines why some countries are more innovative than others why national styles of innovation differ and goes on to explore why some countries make radical innovations but fail to successfully market them whilst others making incremental innovations have more commercial success The book draws on a variety of different literatures and perspectives to illustrate the organizational and institutional dimensions of national innovation systems Literatures discussed include the economics of innovation organizational sociology administrative science institutional economics organizational learning network analysis business systems economic governance and regulation This truly interdisciplinary book will be invaluable to academics and

researchers focussing on innovation in a wide range of fields It will also strongly appeal to practitioners and policymakers concerned with innovation

Building the Virtual State Jane E. Fountain,2004-05-28 The benefits of using technology to remake government seem almost infinite The promise of such programs as user friendly virtual agencies and portals where citizens can access all sections of government from a single website has excited international attention The potential of a digital state cannot be realized however unless the rigid structures of the contemporary bureaucratic state change along with the times Building the Virtual State explains how the American public sector must evolve and adapt to exploit the possibilities of digital governance fully and fairly The book finds that many issues involved in integrating technology and government have not been adequately debated or even recognized Drawing from a

rich collection of case studies the book argues that the real challenges lie not in achieving the technical capability of creating a government on the web but rather in overcoming the entrenched organizational and political divisions within the state Questions such as who pays for new government websites which agencies will maintain the sites and who will ensure that the privacy of citizens is respected reveal the extraordinary obstacles that confront efforts to create a virtual state These political and structural battles will influence not only how the American state will be remade in the Information Age but also who will be the winners and losers in a digital society
