Stewardship Across Boundaries:

Stewardship Across Boundaries Richard L. Knight, Peter Landres, 2013-06-17 Every piece of land no matter how remote or untrammeled has a boundary. While sometimes boundary lines follow topographic or biological features, more often they follow the straight lines of political dictate and compromise. Administrative boundaries nearly always fragment a landscape, resulting in loss of species that must disperse or migrate across borders, increased likelihood of threats such as alien species or pollutants, and disruption of natural processes such as fire. Despite the importance and ubiquity of boundary issues, remarkably little has been written on the subject. *Stewardship Across Boundaries* fills that gap in the literature, addressing the complex biological and socioeconomic impacts of both public and private land boundaries in the United States. With contributions from natural resource managers, historians, environmentalists, political scientists, and legal scholars, the book develops a framework for understanding administrative boundaries and their effects on the land and on human behavior; examines issues related to different types of boundaries: wilderness, commodity, recreation, private, public; presents a series of case studies illustrating the efforts of those who have cooperated to promote stewardship across boundaries; synthesizes the broad complexity of boundary-related issues and offers an integrated strategy for achieving regional stewardship. *Stewardship Across Boundaries* should spur open discussion among students, scientists, managers, and activists on this important topic. It demonstrates how legal, social, and ecological conditions interact in causing boundary impacts and why those factors must be integrated to improve land management. It also discusses research needs and will help facilitate critical thinking within the scientific community that could result in new strategies for managing boundaries and their impacts. **Wilderness Science**

in a Time of Change Conference: Wilderness within the context of larger systems, 2000 Applying Ecological Principles to Land Management Virginia H. Dale, Richard A. Haeuber, 2011-06-27 This volume applies ecological principles and guidelines to understand past and current land use and land management and more importantly endeavors to promote more ecologically sound approaches to future land use and management decisions. The volume incorporates case studies from a wide variety of disciplines and perspectives. The case studies explore past and current land use decisions on both public and private lands and include practical approaches and tools for land use decision making. Perhaps the most important feature of the book is the linking of ecological theory and principle with applied land use decision making: the theoretical and empirical are joined through concrete case studies of actual land use decision making processes. In this volume, readers will find a statement of fundamental ecological principles that are relevant for land use planning and management, coupled with multiple in-depth explorations of the application of these principles in action. In addition, most case studies describe specific tools and approaches for incorporating endeavors to join fundamental ecological knowledge with cutting-edge application in order to both educate and provide concrete guidance for decision making. The intended audience is broad and multidisciplinary, from undergraduate and graduate level courses in environmental studies to professional land use planners.

Wilderness Science in a Time of Change Conference, 2000 **Applying Landscape Ecology in Biological Conservation** Kevin Gutzwiller, 2011-06-27 Landscape ecology and conservation biology are rapidly developing disciplines and a current synthesis of principles and applications in these two fields is needed under one cover Many managers are not applying principles of landscape ecology in efforts to conserve biota yet the loss of biological diversity could be reduced if broad scale processes and patterns were consistently considered in management and conservation decisions Bringing together insights from leaders in landscape ecology and conservation biology this book explains how our knowledge about landscape ecology can help us understand manage and maintain biodiversity Beyond explaining pertinent concepts of landscape ecology and biological conservation and describing examples of their use in management research and planning this book also distills principles for applying landscape ecology in conservation identifies gaps in current knowledge and provides research approaches to fill those voids The book is divided into five parts the first part introduces the book and discusses what landscape ecology is and why it is important to biological conservation The second deals with multiple scales connectivity and organism movement The third part discusses landscape change and how this affects biodiversity and the fourth part covers conservation planning The final part presents a synthesis that identifies overarching principles pervasive constraints and realistic prospects for applying landscape ecology in biological conservation Conservationists land use planners and ecologists will find this book to be an essential resource Foreword by Richard T T Forman **Ensuring Greater Yellowstone's Future** Susan Gail Clark, 2008-10-01 Drawing on extensive conservation experience in the greater Yellowstone region Susan G Clark outlines the leadership and policy issues associated with managing greater Yellowstone's natural resources and assesses the successes and failures of those who have worked there toward sustainability over the past 40 years **The Mystery of Capital and the Construction of Social Reality** Barry Smith, David Mark, Isaac Ehrlich, 2015-11-05 John Searle's The Construction of Social Reality and Hernando de Soto's The Mystery of Capital shifted the focus of current thought on capital and economic development to the cultural and conceptual ideas that underpin market economies and that are taken for granted in developed nations This collection of essays assembles 21 philosophers economists and political scientists to help readers understand these exciting new theories Making and Moving Knowledge John Sutton Lutz, Barbara Neis, 2008-07-09 It has been clear for some time that research does not automatically translate into knowledge nor does knowledge necessarily translate into wisdom Whether the immediate challenge is global warming epidemic disease poverty environmental degradation or social fragmentation research efforts are wasted if we cannot devise efficient and understandable processes to create and transfer knowledge to policy makers interested groups and communities How to maximize the impact of scholarly research and combine it with practical knowledge already

available in lay communities are key issues in a world threatened with social ecological disasters Making and Moving Knowledge focuses directly on how knowledge is created and transferred or is blocked and atrophies It places knowledge generated by universities and governments beside practical knowledge from coastal aboriginal and non aboriginal communities and looks at how different kinds of knowledge flow in different directions Concentrating on intellectually fertile spaces at the edges of disciplines and the rich socio ecological interfaces where land meets sea authors demonstrate their commitment to knowledge transfer in their work showing how knowledge transfer can be considered theoretically methodologically and practically
