Stimulating Simulations:

Simulations of Decision-Making as Active Learning Tools Peter Bursens, Vincent Donche, David Gijbels, Pieter Spooren, 2018-03-05 This volume brings together both political and educational scientists While educational research literature has so far not systematically addressed the tool of simulations of decision making political scientists have hardly used insights from research on assessment or on motivation and interest of students Almost all political science publications on simulations merely discuss how to implement the tool in class and fall short of providing evidence of the effects on student outcomes such as increased interest and performance Combining the two disciplines is mutually enriching Political science benefits from state of the art educational science measuring and testing of the claims made by the proponents of simulations while educational sciences adds the systematic analysis of simulations of decision making to their list of empirical objects which also adds insights to the theories on the affective component of student learning It is the explicit aim of the volume to address how simulating decision making environments fosters learning Implications for research and practice regarding student learning are addressed in all chapters Computer Games Blair Carter, 2002 Lists the most significant writings on computer games including works that cover recent advances in gaming and the substantial academic research that goes into devising and improving computer games *Instructional Simulation Games* Sivasailam Thiagarajan, Harold D. Stolovitch, 1978

Models and Simulations of the Electric Field in Deep Brain Stimulation Fabiola Alonso, 2018-09-10 Deep brain stimulation DBS is an established surgical therapy for movement disorders such as Parkinson's disease PD and essential tremor ET A thin electrode is implanted in a predefined area of the brain with the use of stereotactic neurosurgery In the last few years new DBS electrodes and systems have been developed with possibilities for using more parameters for control of the stimulation volume In this thesis simulations using the finite element method FEM have been developed and used for investigation of the electric field EF extension around different types of DBS lead designs symmetric steering and stimulation modes voltage current The electrode surrounding was represented either with a homogeneous model or a patient specific model based on individual preoperative magnetic resonance imaging MRI The EF was visualized and compared for different lead designs and operating modes In Paper I the EF was quantitatively investigated around two lead designs 3389 and 6148 simulated to operate in voltage and current mode under acute and chronic time points following implantation Simulations showed a major impact on the EF extension between postoperative time points which may explain the clinical decisions to change the stimulation amplitude weeks after implantation In Paper II the simulations were expanded to include two leads having steering function 6180 Surestim1 and patient specific FEM simulations in the zona incerta It was found that both the heterogeneity of the tissue and the operating mode influence the EF distribution and that equivalent contact configurations of the leads result in similar EF The steering mode presented larger volumes in current mode when using equivalent amplitudes Simulations comparing DBS and intraoperative

stimulation test using a microelectrode recording MER system Paper III showed that several parallel MER leads and the presence of the non active DBS contacts influence the EF distribution and that the DBS EF volume can cover but also extend to other anatomical areas Paper IV introduces a method for an objective exploitation of intraoperative stimulation test data in order to identify the optimal implant position in the thalamus of the chronic DBS lead Patient specific EF simulations were related to the anatomy with the help of brain atlases and the clinical effects which were quantified by accelerometers The first results indicate that the good clinical effect in ET is due to several structures around the ventral intermediate nucleus of the thalamus

Lacking a digital crystal ball we cannot predict the future of education or the precise instructional role games will have going forward Yet we can safely say that games will play some role in the future of K 12 and higher education and members of the games community will have to choose between being passive observers or active progressive contributors to the complex and often political process of weaving together pedagogy technology and culture This will involve agreeing that games or more specifically game mechanics and the engagement in joyful learning that they engender are not only critical for shaping online and classroom instruction but also the evolution of schooling as a whole Likewise it will involve a hard push beyond questions like Are video games good or bad for education and Are games better for all students than traditional face to face teaching to unpack how game experiences vary with individual learner goals as an interaction with the parameters of an educational environment Simply put we need to form a cohesive compelling argument in support of the notion that games are entire learning ecologies in and of themselves This edited volume is designed to anchor collective thinking with respect to the value added nature of games for learning and the complexities involved in player experience narrative context and environmental player interactions As could be expected we are not interested in debates about gamification game violence individual game quality and other topics that have become standard fare in extant games literature Instead we seek to emphasize issues of scalability the induction of player goal adoption affordances of game based instructional environments relationships between play and transfer and the value of games as part of an ecopsychological worldview As long time contributors in a field that has made a habit of playing it safe pun intended we seek to bring the dialogue in a more nuanced and meaningful direction that will reach teachers researchers designers and players alike

Musical Stimulacra Ivan Delazari, 2020-12-29 The title coinage of this book *stimulacra* refers to the fundamental capacity of literary narrative to stimulate our minds and senses by simulating things through words Musical *stimulacra* are passages of fiction that readers are empowered to transpose into mental simulations of music The book theorizes how fiction can generate musical experience explains what constitutes that experience and explores the musical dimensions of three American novels William T Vollmann's *Europe Central* 2005 William H Gass's *Middle C* 2013 and Richard Powers's *Orfeo* 2014 *Musical Stimulacra* approaches fiction's music from a readerly perspective Instead of looking at

how novels forever fail to compensate for music's physical structural and affective properties the book concentrates on what literary narrative can do musically Negotiating common grounds for cognitive audionarratology and intermediality studies Musical Stimulacra builds its case on the assumption that among other things fiction urges us to listen to musical words and worlds More Like Life Itself Cory Wright-Maley, 2018-10-01 John Dewey wrote in multiple places that education should be an experience of the content and processes of life itself Too often social studies is taught in a way that tells students about real life but fails to engage them in the process of life for which Dewey advocated The core purpose of simulations is to reflect the processes events and phenomena expressed in a variety of real life domains They engage students in these reflections of real life meaningfully as active agents who have the power to make decisions that impact the direction of events and that lead to both intended and unintended consequences Because of the nature of simulations students who participate in them are able to build their capacities to think in complex and critical ways Today despite the growing evidence that simulations have an important role to play in the teaching of social studies they remain an underutilized and undervalued approach to the discipline One of the key obstacles to their widespread adoption is the limited availability of training resources available to social studies teachers Teachers need support to develop a new vision of social studies teaching and learning coupled with practical guidance necessary to implement simulations effectively This volume provides teachers with both When teachers are able to weave simulations effectively into the fabric of social studies teaching and learning they help to promote social studies experiences that are both powerful and purposeful They offer students an experience of the discipline that is indeed More Like Life Itself *International Operations Simulation* Hans B. Thorelli, R. L. Graves, 1964 **Computer Decisions**, 1983
