Stimulus Response Coupling:

Stimulus-response Coupling [Published Work]. Timothy James Rink, 1987 **Stimulus Response Coupling** Vana Smith, John R. Dedman, 1990-10-24 This volume examines the role of intracellular calcium in the transmission of external chemical physical and electrical stimuli to the interior of the cell and the role of calcium in the physiological and metabolic effects of such stimuli **Stimulus Response Coupling** Vana L. Smith, John Dedman, 1990 This volume examines the role of intracellular calcium in the transmission of external chemical physical and electrical stimuli to the interior of the cell and the role of calcium in the physiological and metabolic effects of such stimuli Studies on Stimulus-response Coupling in Smooth Muscle E. N. Chayen, University of Brunel, 1983 **The Pharmacology of Functional, Biochemical, and Recombinant Receptor Systems** T. Kenakin, J. A. Angus, 2012-12-06 This the 148th volume of the Handbook of Experimental Pharmacology series focuses on the very core of pharmacology namely receptor theory It is fitting that the originator of receptor pharmacology A J CLARK authored the fourth volume of this series 63 years ago In that volume CLARK further developed his version of receptor theory first described four years earlier in his classic book *The Mode of Action of Drugs* An examination of the topics covered in volume 4 reveals a striking similarity to the topics covered in this present volume pharmacologists today are still as interested in unlocking the secrets of dose response relationships to reveal the biological and chemical basis of drug action as they were over half a century ago Sections in that 1937 volume such as *Curves relating exposure to drugs with biological effects* and *Implications of monomolecular theory* show Clark's keen insight into the essential questions that required answers to move pharmacology forward With the advent of molecular biological cloning of human receptors has come a transformation of receptor pharmacology Thus the expression of human receptors into surrogate host cells helped unlock secrets of receptor mechanisms and stimulus transduction pathways To a large extent this eliminates the leap of faith required to apply receptor activity of drugs tested on animal receptor systems to the human therapeutic arena However a new leap of faith concerning the veracity of the effects found in recombinant systems with respect to natural ones is now required Stimulus-response Coupling in Smooth Muscle Alec William Michael Simpson, 1989 *Mechanisms of Stimulus-response Coupling in Platelets*, 1985 *Stimulus-response Coupling in Platelets* Evelyn Mei Huang, 1986 *Biochemical Actions of Hormones V8* Gerald Litwack, 2012-12-02 *Biochemical Actions of Hormones* Volume VIII is an eight chapter text that covers the developments in the understanding of the biochemical aspects of hormonal action and regulation This volume examines first the messenger functions of calcium in hormonal systems The next chapters deal with the neuronal regulation of blood pressure the regulation of protein synthesis by phosphorylation and the hormonal control of hepatic gluconeogenesis These topics are followed by discussions on the effects of insulin in intracellular functions the mechanisms of steroidal hormones and the membrane recognition and effector sites in steroid hormone action A chapter focuses on the activation of steroid receptor complexes The final chapters survey the estradiol and

progesterone receptors in the human endometrium This book will be of great value to biologists biochemists and researchers in the field of hormonal action Wavelets in Neuroscience Alexander E. Hramov,Alexey A. Koronovskii,Valeri A. Makarov,Vladimir A. Maksimenko,Alexey N. Pavlov,Evgenia Sitnikova,2021-06-16 This book illustrates how modern mathematical wavelet transform techniques offer fresh insights into the complex behavior of neural systems at different levels from the microscopic dynamics of individual cells to the macroscopic behavior of large neural networks It also demonstrates how and where wavelet based mathematical tools can provide an advantage over classical approaches used in neuroscience The authors well describe single neuron and populational neural recordings This 2nd edition discusses novel areas and significant advances resulting from experimental techniques and computational approaches developed since 2015 and includes three new topics Detection of fEPSPs in multielectrode LFPs recordings Analysis of Visual Sensory Processing in the Brain and BCI for Human Attention Control Analysis and Real time Classification of Motor related EEG Patterns The book is a valuable resource for neurophysiologists and physicists familiar with nonlinear dynamical systems and data processing as well as for graduate students specializing in these and related areas
