

Is Stimulus Sampling Theory a Model?

- “The term ‘stimulus sampling theory’ refers to a number of theories differing with respect to special assumptions and their mathematical expression, yet sharing a common approach to conceptual representation of the stimulus situation and the formation of associative connections, rather than to a single coherent set of assumptions formulated to apply to all the experimental procedures employed in the study of learning” (p. 1).

Stimulus Sampling Theory:

A Generalization of Stimulus Sampling Theory Richard C. Atkinson, 1960 Stimulus sampling theory E. D. ; Estes Neimark (W. K.), 2023 **Stimulus Sampling Theory** Richard C. Atkinson, William Kaye Estes, 1962 Some of the fundamental mathematical techniques of stimulus sampling theory are presented The simplest of all learning models the pattern model for simple learning is presented in which the population of available stimulation is ASSUMED TO COMPRISE A SET OF DISTINCT STIMULUS PATTERNS EXACTLY ONE OF WHICH IS SAMPLED ON EACH TRIAL In the important special case of the one-element model it is assumed that there is only one such pattern and that it recurs intact at the beginning of each experimental trial The one-element model is worthy of study not only for expositional purposes but also for its value as an analytic device in relation to certain types of learning data After a treatment of pattern models for simple acquisition and for learning under probabilistic reinforcement schedules the conceptualization of generalization and transfer is discussed the component models in which the patterns of stimulation effective on individual trials are treated not as distinct elements but as overlapping samples from a common population and finally some examples of the more complex multiple process models which are becoming increasingly important in the analysis of discrimination learning concept formation and related phenomena are discussed Author Stimulus Sampling Theory [by] E.D. Neimark [and] W.K. Estes E. D.
