Time machines really do exist. Archaeologists — scientists who study how our ancestors lived — use them to travel back into the past. They call their time machines "spades". With the aid of spades, brownies, and even soft brushes, archaeologists dig up the bones of long-dead people and animals. And deeper, they travel back in time, for they know that, on any one spot, the objects close to the surface are more recent, those buried deeper are the oldest. At the bottom of the earth, they find the remains of dinosaurs, long-extinct pictures of vanished ages. Far below the city streets lies solid rock.

Now paleontologists take up the journey. They study fossils - stone casts of the animals and plants from the past. From fossils they can judge what life was like thousands of years ago. From a grain of pollen or an alligator's teeth, formed thousands of miles of years ago, before life began, they are a reminder that our Earth was once a ball of dust spinning in cold black space.
