Environmental Microbiology and Biotechnology Anoop Singh, Shaili Srivastava, Dheeraj Rathore, Deepak Pant, 2020-09-23
This book provides up to date information on the state of the art in applications of biotechnological and microbiological tools for protecting the environment. Written by leading international experts it discusses potential applications of biotechnological and microbiological techniques in solid waste management, wastewater treatment, agriculture, energy and environmental health. This first volume of the book *Environmental Microbiology and Biotechnology* covers three main topics: Solid waste management, Agriculture utilization and Water treatment technology, exploring the latest developments from around the globe regarding applications of biotechnology and microbiology for converting wastes into valuable products and at the same time reducing the environmental pollution resulting from disposal. Wherever possible it also includes real world examples. Further it offers advice on which procedures should be followed to achieve satisfactory results and provides insights that will promote the transition to the sustainable utilization of various waste products.

The Natural Environment and the Biogeochemical Cycles, 1984-12-01
Environmental Chemistry is a relatively young science. Interest in this subject however is growing very rapidly and although no agreement has been reached as yet about the exact content and limits of this interdisciplinary discipline there appears to be increasing interest in seeing environmental topics which are based on chemistry embodied in this subject. One of the first objectives of Environmental Chemistry must be the study of the environment and of natural chemical processes which occur in the environment. A major purpose of this series on Environmental Chemistry therefore is to present a reasonably uniform view of various aspects of the chemistry of the environment and chemical reactions occurring in the environment. The industrial activities of man have given a new dimension to Environmental Chemistry. We have now synthesized and described over five million chemical compounds and chemical industry produces about hundred and fifty million tons of synthetic chemicals annually. We ship billions of tons of oil per year and through mining operations and other geophysical modifications large quantities of inorganic and organic materials are released from their natural deposits. Cities and metropolitan areas of up to 15 million inhabitants produce large quantities of waste in relatively small and confined areas. Much of the chemical products and waste products of modern society are released into the environment either during production, storage, transport, use or ultimate disposal. These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems.

Metal Ions in Biological Systems Helmut Sigel, Astrid Sigel, 2024-11-15
This volume is devoted to the research area regarding the biological properties of metal alkyl derivatives, offering an authoritative account of this subject by 16 scientists. In 11 chapters *Biological Properties of Metal Alkyl Derivatives* highlights in detail derivatives of germanium, tin, lead, arsenic, antimony, selenium, tellurium, cobalt, vitamin B12 derivatives and nickel coenzyme F430, including the role of mainly microorganisms in their formation. The derivatives of indium, thallium, bismuth, various transition metals and mercury are also

covered to some extent as are those of the non metals silicon phosphorus and sulfur and the haloperoxidase route of the biogenesis of halomethanes by fungi and plants The properties of these alkyl derivatives their biosynthesis including mechanistic aspects their appearance in waters rivers lakes oceans and sediments and their physiological and toxic effects are summarized
