Brain Mechanisms in Problem Solving and Intelligence Robert Thompson, Francis M. Crinella, Jen Yu, 2013-11-21 This book is the outcome of a decade of research on the neuroanatomical mechanisms of learning in the young laboratory rat It is essentially a discourse on the functional organization of the brain in relation to problem solving ability and intelligence During the period between 1980 and 1989 well over 1000 weanling albino rats were subjected to localized brain damage or sham operations in the case of the controls under deep anesthesia and aseptic surgical conditions were allowed to recover and subsequently were tested on a wide variety of problems designed to measure general learning ability Since virtually every part of the brain rostral to the medulla has been explored with lesions it has become possible not only to map a number of putative brain systems underlying the acquisition of distinctive problem solving tasks but to isolate several neuroanatomical mechanisms that appear to be selectively involved in the acquisition of particular kinds of goal directed learned activities Of particular interest was the discovery of a nonspecific mechanism previously referred to in our research reports as the general learning system inhabiting the interior parts of the brain One objective of this volume was to make these maps available in a single source Another was to provide a description of learning syndromes arising from local lesions to different parts of the brain

Consciousness and Self-Regulation Gary Schwartz, 2012-12-06 The first and foremost concrete fact which every one will affirm to belong to his inner experience is the fact that consciousness of some sort goes on I William James 1893 We are witnessing today a mounting interest among behavioral and biological scientists in problems long recognized as central to our understanding of human nature yet until recently considered out of the bounds of scientific psychology and physiology Sometimes thrown into the heading of altered states of consciousness this growing research bears directly upon such time honored questions as the nature of conscious experience the mind body relationship and volition If one broadly views this research as encompassing the two interrelated areas of consciousness and self regulation one can find many relevant contemporary examples of creative and experimentally sophisticated approaches including research on the regulation of perception and sensory experience attention imagery and thinking emotion and pain hypnosis and meditation biofeedback and voluntary control hemispheric asymmetry and specialization of brain function drug induced subjective states and biological rhythms Because the material is spread over many different kinds of publications and disciplines it is difficult for anyone person to keep fully abreast of the significant advances The overall aim of the new Plenum Series in Consciousness and Self Regulation Advances in Research is to provide a scholarly forum for discussing integration of these diverse areas by presenting some of the best current research and theory Handbook of Intelligence Robert J. Sternberg, 2000-03-13 Not since the landmark publication of Handbook of Human Intelligence in 1982 has the field of intelligence been more alive than it is today Spurred by the new developments in this rapidly expanding field Dr Sternberg has brought together a stellar list of contributors to provide a comprehensive broad and deeply thematic review of intelligence that will be accessible to both scholar and student The field of intelligence is lively on many fronts and this volume provides full coverage on topics such as behavior genetic models evolutionary models cognitive models emotional intelligence practical intelligence and group difference Handbook of Intelligence is largely expanded covering areas such as animal and artificial intelligence as well as human intelligence It fully reflects important theoretical progress made since the early 1980s
