Web-Based Learning and Teaching Technologies: Opportunities and Challenges Aggarwal, Anil K., 1999-07-01. During the past two decades, telecommunication technologies combined with Web-enabled technologies have created a new technology-based focus: Web-based learning and teaching. This new area has changed the concept of education around the world, creating new challenges and opportunities offered by this new technology-based concept. *Web-Based Learning and Teaching Technologies: Opportunities and Challenges* addresses many issues, trends, opportunities, and problems facing colleges and universities in the effective utilization and management of Web-based learning and teaching technologies. *Organizations and Unusual Routines* Ronald E. Rice, Stephen D. Cooper, 2010-10-07. Everyone working in and with organizations will from time to time experience frustrations and problems when trying to accomplish tasks that are a required part of their role. This is an unusual routine, a recurrent interaction pattern in which someone encounters a problem when trying to accomplish normal activities by following standard organizational procedures and then becomes enmeshed in wasteful and even harmful subroutines while trying to resolve the initial problem. They are unusual because they are not intended or beneficial and because they are generally pervasive but individually infrequent. They are routines because they become systematic as well as embedded in ordinary functions. Using a wide range of case studies and interdisciplinary research, this book provides researchers and practitioners with a new vocabulary for identifying, understanding, and dealing with this pervasive organizational phenomenon in order to improve worker and customer satisfaction as well as organizational performance.

Intellectual Teamwork Jolene Galegher, Robert E. Kraut, Carmen Egido, 2014-01-14 This book seeks to establish an interdisciplinary applied social scientific model for researchers and students that advocates a cooperative effort between machines and people After showing that basic research on social processes offers much needed guidance for those creating technology and designing tools for group work its papers demonstrate the mutual relevance of social science and information system design and encourage better integration of these disciplines This comprehensive collection closely examines the variety of electronic tools being deployed to solve traditional problems in communication and coordination Unfortunately research shows that these tools have not been as successful as their designers had envisioned partially because they were not always produced with the needs and goals of their human users in mind The editors goal is to entice more social scientists to orient their research around questions of practical interest to information system designers and to convince designers to search for the knowledge about social and organizational behavior that would make their tools more useful
