Low Dose Exposures in the Environment C. Streffer, H. Bolt, D. Follesdal, P. Hall, J.G. Hengstler, P. Jacob, D. Oughton, K. Prieß, E. Reh binder, E. Swaton, 2013-11-11 The ever increasing release of harmful agents due to human activities have led in some areas of the world to heavy pollution In order to protect human health and the environment environmental standards that shall limit the release and the concentration of those toxic agents in the environment and hence the exposure to it have to be established The related

assessment and decision making procedures have to be based on solid scientific data about the effects and mechanisms of these agents as well as on ethical social and economic aspects For risk evaluation the knowledge of the dose response curve is an essential prerequisite Dose responses without a threshold dose are most critical in this connection Such dose responses are assumed for mutagenic and carcinogenic effects which therefore dominate also the discussion in this book In the environmentally important low dose range risk estimation can only be achieved by extrapolation from higher doses with measurable effects The extrapolation is accompanied with uncertainties which makes risk evaluation as well as risk communication frequently problematic In order to ensure rational efficient and fair decisions beyond a sound scientific assessment the dialogue between disciplines with the affected people and with the general public is necessary In this book the whole range of relevant and essential aspects of risk evaluation and standard setting is addressed Starting with the ethical foundations the sound analysis of recent scientific findings sets the frame for further reflections by theory of cognition psychosocial sciences and jurisprudence The authors end up with concluding recommendations for coping with the recent problems of standard setting in the field of environmentally relevant low doses The book is designed to a readership of scientists legislators administrators and the interested public

The Promise of Low Dose Naltrexone Therapy Elaine A. Moore, Samantha Wilkinson, 2009-01-22 Naltrexone is an opiate antagonist drug developed in the 1970s and approved by the FDA in 1984 for opiate and drug abuse treatment When used at much lower doses in an off label protocol referred to as low dose naltrexone LDN the drug has been shown to halt disease progression in Crohn's disease and certain cancers to reduce symptoms in multiple sclerosis and autism and to improve numerous autoimmune and neurodegenerative conditions including Parkinson's disease and amyotrophic lateral sclerosis ALS Grounded in clinical and scientific research this book describes the history of naltrexone its potential therapeutic uses its effects on the immune system its pharmacological properties and how the drug is administered It also lists fillers and compounding pharmacies doctors who prescribe LDN and patient resources and includes interviews with LDN patients and researchers

Encyclopedia of Environmental Health ,2019-08-22 Encyclopedia of Environmental Health Second Edition Six Volume Set presents the newest release in this fundamental reference that updates and broadens the umbrella of environmental health especially social and environmental health for its readers There is ongoing revolution in governance policies and intervention strategies aimed at evolving changes in health disparities disease burden trans boundary transport and health hazards This new edition reflects these realities mapping new directions in the field that include how to minimize threats and develop new scientific paradigms that address emerging local national and global environmental concerns Represents a one stop resource for scientifically reliable information on environmental health Fills a critical gap with information on one of the most rapidly growing scientific fields of our time Provides comparative approaches to environmental health practice and research in different countries and regions of the world Covers issues behind specific questions and describes the best available scientific methods for environmental risk assessment

Global New Drug Development Jan A. Rosier,Mark A. Martens,Josse R. Thomas,2014-07-03 The development of new drugs is very complex costly and risky Its success is highly dependent on an intense collaboration and interaction between many departments within the drug development organization external investigators and service providers in constant dialogue with regulatory authorities payers academic experts clinicians and patient organizations Within the different phases of the drug life cycle drug development is by far the most crucial part for the initial and continued success of a drug on the market This book offers an introduction to the field of drug development with a clear overview of the different processes that lead to a successful new medicine and of the regulatory pathways that are used to launch a new drug that are both safe and efficacious This is the most comprehensive and detailed book on drug development I have ever read and I feel that it is likely to become a staple of drug development courses such as those taught at Masters Level in my own University I think in the light of increasing integration of company and academic approaches to drug development both sides can read this book and therefore this book could not be more timely Professor Mike Coleman University of Aston UK from his review of the final manuscript
