Mac Gregor, 1992-09-30 The Rationale for the Present Book Perhaps the most critical problem facing present day particle physics is to delineate the relationship between classical and quantum systems This relationship has many facets Particle wave duality is one The concept of the point particle is another And the concept of particle mass is yet another The electron as the lightest of the charged particles represents a fundamental ground state and many of the essential problems in the murky area between the domains of classical and quantum physics can be brought into focus by studying just this one particle Thus the present book is centered on questions that arise in connection with the electron and in particular with its mass which has remained an unsolved and indeed almost unexplored mystery Each student of physics beginner and professional alike has to fashion for himself a way of thinking about the electron If after reading this book the reader views this topic somewhat differently than before the efforts of the author will have been amply rewarded When physicists were confronted with the properties of the electron they made a conceptual leap into the unknown they concluded that the electron does not obey classical laws with respect to mechanics as

connected to the spin of the electron and also with respect to electrodynamics as connected to the magnetic moment of the electron **Frontiers of Physics: 1900-1911** MILLER,2012-12-06 P W Bridgman and the Special Theory of Relativity Ey W Bridgman wrote A S phi ticati *The Oxford Handbook of Philosophy of Time* Craig Callender,2011-04-07 As the study of time has flourished in the physical and human sciences the philosophy of time has come into its own as a lively and diverse area of academic research Philosophers investigate not just the metaphysics of time and our experience and representation of time but the role of time in ethics and action and philosophical issues in the sciences of time especially with regard to quantum mechanics and relativity theory This Handbook presents twenty three specially written essays by leading figures in their fields it is the first comprehensive collaborative study of the philosophy of time and will set the agenda for future work
