Socio-Cognitive Dynamics in Strategic Processes Maren S. D. Breuer, 2010 Process related considerations in strategy research and approaches to managerial cognition constitute two highly valuable yet still only limitedly integrated fields of interest in strategic management To fill this void the work starts from a cognitive perspective with the overall aim of examining the emergence of organisational strategies in strategic processes The central research object strategy is thereby conceptualized as shared strategic orientations among an organisation's key actors The existing gap between strategy process research and cognitive strategy research is closed on a conceptual level first by developing and specifying a socio cognitive perspective on strategic processes In recognition of the central importance of social interactions in this context the focus is then set on a specific core forum for strategic activities i.e. strategic decision making groups In this the nature and the role of social interactions for the developing strategy related knowledge structures is examined first conceptually leading to the development of a socio cognitive model on strategic decision making in groups followed by a qualitative empirical study in this kind of activity forum With its truly interdisciplinary nature the dissertation is of interest for strategy scholars as it enlarges the pool of knowledge in strategic management both content wise and also methodologically with the innovative empirical research approach adopted For practitioners contributions are made by detailing the different dimensions of strategic processes and hence sensitizing to

important factors for careful overall process designs At the micro level concrete suggestions are derived for composing and instructing strategy teams in such a way as to allow for efficient interchanges during the discussions themselves as well as to enable the effectiveness of these efforts beyond the specific group context and for the performance of the wider organisation

The Teacher's Role in Implementing Cooperative Learning in the Classroom Robyn M. Gillies, Adrian Ashman, Jan Terwel, 2007-09-26 Cooperative learning is widely endorsed as a pedagogical practice that promotes student learning Recently the research focus has moved to the role of teachers discourse during cooperative learning and its effects on the quality of group discussions and the learning achieved However although the benefits of cooperative learning are well documented implementing this pedagogical practice in classrooms is a challenge that many teachers have difficulties accomplishing Difficulties may occur because teachers often do not have a clear understanding of

the basic tenets of cooperative learning and the research and theoretical perspectives that have informed this practice and how they translate into practical applications that can be used in their classrooms In effect what do teachers need to do to affect the benefits widely documented in research A reluctance to embrace cooperative learning may also be due to the challenge it poses to teachers control of the learning process the demands it places on classroom organisational changes and the personal commitments teachers need to make to sustain their efforts Moreover a lack of understanding of the key role teachers need to play in embedding cooperative learning into the curricula to foster open communication and engagement among teachers and students promote cooperative investigation and problem solving and provide students with emotionally and intellectually stimulating learning environments may be another contributing factor The Teacher s Role in Implementing Cooperative Learning in the Classroom provides readers with a comprehensive overview of these issues with clear guidelines on how teachers can embed cooperative learning into their classroom curricula to obtain the benefits widely attributed to this pedagogical practice It does so by using language that is appropriate for both novice and experienced educators The volume provides an overview of the major research and theoretical perspectives that underpin the development of cooperative learning pedagogy outlines how specific small group experiences can promote thinking and learning discusses the key role teachers play in promoting student discourse and demonstrates how interaction style among students and teachers is crucial in facilitating discussion and learning The collection of chapters includes many practical illustrations drawn from the contributors own research of how teachers can use cooperative learning pedagogy to facilitate thinking and learning among students across different educational settings Sociological Terminology and Classification Schemes Lalit P.
