Small Deception:

A Small Deception Preston Harper, 2010-08-10 *A Small Deception* is a novel that explores the fatal consequences its characters must face when they let a situation be the determining factor in deciding what is right and wrong. While traveling to San Antonio for a short vacation, Morton Wynn sees a driver lose control of her Ford Mustang and plunge into a plowed field. He rescues her from her upturned, burning vehicle and takes her to a nearby hospital in Vista, a small West Texas town. Because she is an unwed expectant mother, Maggie Collins persuades him to pose as her husband so her conservative Christian father won't be embarrassed by her situation and lose his positions as 1. an elder of a church trying to hold onto its fundamentalist beliefs and 2. a highly respected banker and councilman of a community trying to survive an economic downturn. Besides his immediate sexual entanglements with Maggie and her nubile sister, Morton also gets caught in a web of violence, including a horrifying murder by someone who desperately wants Maggie's father to support a proposed nuclear power plant he has staunchly opposed.

Little Wild Curtis LeBlanc, 2018-04-28 *Little Wild* explores the performance of masculinity in contemporary Canada with a focus on how toxic masculinity relates to mental health, aggression, substance abuse, and crises of identity. Through the reimagining of family histories and personal experiences, the poems in this collection exact a representation of a young man in conflict with outdated ideals of virility, struggling to redefine himself on his own terms. *Little Wild* is a provocative and revealing portrayal of masculinity as it is understood and misunderstood in a contemporary and ever-changing context. The poems are as powerful and unsettling as they are stark, combining unsentimental imagery of the natural world with first-person commentary while exploring narratives of boyhood, adolescence, and adulthood.

Understanding High-Dimensional Spaces David B. Skillicorn, 2012-09-24 High-dimensional spaces arise as a way of modelling datasets with many attributes. Such a dataset can be directly represented in a space spanned by its attributes, with each record represented as a point in the space, its position depending on its attribute values. Such spaces are not easy to work with because of their high dimensionality; our intuition about space is not reliable, and measures such as distance do not provide as clear information as we might expect. There are three main areas where complex, high dimensionality and large datasets arise naturally: data collected by online retailers, preference sites, and social media sites; and customer relationship databases where there are large but sparse records available for each individual, data derived from text and speech where the attributes are words, and so the corresponding datasets are wide and sparse; and data collected for security, defense, law enforcement, and intelligence purposes where the datasets are large and wide. Such datasets are usually understood either by finding the set of clusters they contain or by looking for the outliers, but these strategies conceal subtleties that are often ignored. In this book, the author suggests new ways of thinking about high-dimensional spaces using two models: a skeleton that relates the clusters to one another and boundaries in the empty space between clusters that provide new perspectives on outliers and on outlying regions. The book will be of value to practitioners, graduate students, and

researchers The Witness of Preaching Thomas G.
