Smart Learning with Educational Robotics Linda Daniela, 2019-06-28 This book will offer ideas on how robots can be used as teachers assistants to scaffold learning outcomes where the robot is a learning agent in self directed learning who can contribute to the development of key competences for today s world through targeted learning such as engineering thinking math physics computational thinking etc starting from pre school and continuing to a higher education level Robotization is speeding up at the moment in a variety of dimensions both through the automation of work by performing intellectual duties and by providing support for people in everyday situations There is increasing political attention especially in Europe on educational systems not being able to keep up with such emerging technologies and efforts to rectify this This edited volume responds to this attention and seeks to explore which pedagogical and educational concepts should be included in the learning process so that the use of robots is meaningful from the point of view of knowledge construction and so that it is safe from the technological and cybersecurity perspective

Technological Adoption and Trends in Health Sciences Teaching, Learning, and Practice Marcos-Pablos, Samuel, Juanes-Méndez, Juan Antonio, 2022-02-11 The use of technology in health sciences has a direct impact on health outcomes as well as on the quality and the safety of healthcare processes In addition the use of new technological developments in medical education has proven to be greatly effective and creates realistic

learning environments to experience procedures and devices that will become common in medical practice However bringing new technologies into the health sector is a complex task which is why a comprehensive vision of the health sciences ecosystem encompassing many different areas of research is vital Technological Adoption and Trends in Health Sciences Teaching Learning and Practice obtains an overview of the technological trends within the health sciences ecosystem identifies the strengths and weaknesses of the research presented to date and depicts possible future research directions within health science education and practice Covering topics such as artificial intelligence and online laboratories it is ideal for health sciences educators and practitioners technological solution providers health organizations health and care workers regulators governing bodies researchers academicians and students

Building Intelligent Interactive Tutors Beverly Park Woolf, 2010-07-28 *Building Intelligent Interactive Tutors* discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs The impact of computers has not been generally felt in education due to lack of hardware teacher training and sophisticated software and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching Dr Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible whether for classroom or life long learning The book describes multidisciplinary approaches to using computers for teaching reports on research development and real world experiences and discusses intelligent tutors web based learning systems adaptive learning systems intelligent agents and intelligent multimedia It is recommended for professionals graduate students and others in computer science and educational technology who are developing online tutoring systems to support e learning and who want to build intelligence into the system Combines both theory and practice to offer most in depth and up to date treatment of intelligent tutoring systems available Presents powerful drivers of virtual teaching systems including cognitive science artificial intelligence and the Internet Features algorithmic material that enables programmers and researchers to design building components and intelligent systems

Studying Virtual Math Teams Gerry Stahl, 2010-05-03 *Studying Virtual Math Teams* centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field The core research team then presents five concrete

analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author s previous research thereby providing smooth continuity and an engaging flow that follows the progression of the research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2 0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse
