The High Frontier:

Kings of the High Frontier Victor Koman, 1998 **To Reach the High Frontier** Roger D. Launius, Dennis R. Jenkins, 2014-07-11 Access no single word better describes the primary concern of the exploration and development of space Every participant in space activities civil military scientific or commercial needs affordable reliable frequent and flexible access to space To Reach the High Frontier details the histories of the various space access vehicles developed in the United States since the birth of the space age in 1957 Each case study has been written by a specialist knowledgeable about the vehicle described and places each system in the larger context of the history of spaceflight The technical challenge of reaching space with chemical rockets the high costs associated with space launch the long lead times necessary for scheduling flights and the poor reliability of the rockets themselves show launch vehicles to be the space program s most difficult challenge **The High Frontier** Gerard K. O'Neill, 1977 Monograph on future habitation and human settlement in outer space describes possible habitats for humanity in space colonies and includes the transcript of a USA congressional hearing on aerospace technology and national needs Illustrations and references *Space, the High Frontier in Perspective* Daniel Deudney, 1982 This paper examines how the exploration of space has affected life on earth Examined are milestones in space war or peace in space learning about earth from space the satellite communications revolution space industrialization and the ownership of space The real beginning of the Space Age was the October 1957 Soviet launch of a 184 pound satellite into orbit The United States put an object into orbit in January 1958 The Soviet Union has taken an important lead in internationalizing access to space by sending Cuban East European French and Mongolian cosmonauts into space The current projects of the U S and Soviet programs the space shuttle and the space station are perfect complements The superpowers have begun a race for the first time to place weapons of destruction in orbit Space militarization is being aggressively promoted by both countries The most valuable contribution space activities have made is the information they have provided about the universe and about the earth For example scientists are learning how the atmosphere oceans sunlight and life forms interact to make the planet habitable and how human actions are altering those systems The biggest scientific advances have been in astronomy and related sciences As a result of the satellite communications revolution satellite TV broadcasts are bringing cultural interactions that for the first time begin to match the scale of the world s economical and political interdependencies Disputes regarding the ownership of space are beginning to emerge RM

Butrica, 2004-12-01 Winner of the Michael C Robinson Prize for Historical Analysis given by the National Council on Public History While the glories and tragedies of the space shuttle make headlines and move the nation the story of the shuttle forms an inseparable part of a lesser known but no less important drama the search for a reusable single stage to orbit rocket Here an award

winning student of space science Andrew J Butrica examines the long and tangled history of this ambitious concept from its first glimmerings in the 1920s when technicians dismissed it as unfeasible to its highly expensive heyday in the midst of the Cold War when conservative backed government programs struggled to produce an operational flight vehicle Butrica finds a blending of far sighted engineering and heavy handed politics To the first and oldest idea that of the reusable rocket powered single stage to orbit vehicle planners who belonged to what President Eisenhower referred to as the military industrial complex added experimental X aircraft like capabilities and eventually a faster cheaper smaller managerial approach Single Stage to Orbit traces the interplay of technology corporate interest and politics a combination that well served the conservative space agenda and ultimately triumphed not in the realization of inexpensive reliable space transport but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty first century

Ballistic missile defense technologies. ,1985 **Environmentalism in Popular Culture** Noël

Sturgeon,2022-04-12 In this thoughtful and highly readable book No l Sturgeon illustrates the myriad and insidious ways in which American popular culture depicts social inequities as natural and how our images of nature interfere with creating solutions to environmental problems that are just and fair for all Why is it she wonders that environmentalist messages in popular culture so often naturalize themes of heroic male violence suburban nuclear family structures and U S dominance in the world And what do these patterns of thought mean for how we envision environmental solutions like green businesses recycling programs and the protection of threatened species Although there are other books that examine questions of culture and environment this is the first book to employ a global feminist environmental justice analysis to focus on how racial inequality gendered patterns of work and heteronormative ideas about the family relate to environmental questions Beginning in the late 1980s and moving to the present day Sturgeon unpacks a variety of cultural tropes including ideas about Mother Nature the purity of the natural and the allegedly close relationships of indigenous people with the natural world She investigates the persistence of the myth of the frontier and its extension to the frontier of space exploration She ponders the popularity and occasional controversy of penguins and penguin family values and questions assumptions about human warfare as natural The book is intended to provoke debates among college students and graduate students among their professors among environmental activists and among all citizens who are concerned with issues of environmental quality and social equality

Playing with the Past Matthew Wilhelm Kapell,Andrew B.R. Elliott,2013-10-24 Game Studies is a rapidly growing area of contemporary scholarship yet volumes in the area have tended to focus on more general issues With Playing with the Past game studies is taken to the next level by offering a specific and detailed analysis of one area of digital game play the representation of history The collection focuses on the ways in which gamers engage with

play with recreate subvert reverse and direct the historical past and what effect this has on the ways in which we go about constructing the present or imagining a future What can World War Two strategy games teach us about the reality of this complex and multifaceted period Do the possibilities of playing with the past change the way we understand history If we embody a colonialist s perspective to conquer primitive tribes in Colonization does this privilege a distinct way of viewing history as benevolent intervention over imperialist expansion The fusion of these two fields allows the editors to pose new questions about the ways in which gamers interact with their game worlds Drawing these threads together the collection concludes by asking whether digital games which represent history or historical change alter the way we today understand history itself *Robert A.
