Small Fatigue Cracks, 2001 Damage tolerant design and life prediction methodologies have been practiced for metallic structures for decades although their application to brittle materials such as ceramics and intermetallic alloys still poses particular problems primarily because of their extreme flaw sensitivity

Mechanics Testing Methods for Polymers, Adhesives and Composites D.R. Moore, J.G. Williams, A. Pavan, 2001-03-09 This book is an overview of ESIS Technical Committee 4's activities since the mid 1980s. A wide range of tests is described and the numerous authors is a reflection of the wide and enthusiastic support we have had. With the establishment of the Technical Committee 4, two major areas were identified as appropriate for the activity. Firstly, there was an urgent need for standard fracture mechanics based test methods to be designed for polymers and composites. A good deal of academic work had been done but the usefulness to industry was limited by the lack of agreed standards. Secondly, there was a perceived need to explore the use of such data in the design of plastic parts. Some modest efforts were made in early meetings to explore this but little progress was made. In contrast, things moved along briskly in the standards work and this has dominated the activity for the last fourteen years. The design issue remains a future goal.

Advances in Mechanical Behaviour, Plasticity and Damage D. Miannay, J.C. Dupré, J.M. Georges, M. Bornert, M. Cherkaoui, R. Schirrer, T. Thomas, S. Pommier, A. Pineau, P. Costa, D. François, A.B. Vannes, A. Lasalmonie, D. Jeulin, D. Marquis, F. Vaillant, H. Burlet, 2000-11-03 Since its inception in 1991, EUROMAT has been held each year on behalf of the Federation of European Materials Societies (FEMS) and alternates between general and topical perspectives. This year's theme, Advances in Mechanical Behaviour, Plasticity and Damage, was proposed by the Société Française de Métallurgie et de Matériaux (SF2M) to FEMS. This publication contains a selection of papers presented at the EUROMAT 2000 Conference held in Tours, France, on 7-9 November 2000. The aim of this Conference was to concentrate mainly on recent advances made in the investigation of the relationship between microstructures of materials and their mechanical behaviour, including fundamentals, modelling and applications. Encompassed in the Conference's aim is the nurturing of the synergistic effect between the theoretical and applied areas in this field. This was achieved by addressing important basic and practical aspects of the mechanical behaviour and damage of materials whilst also providing significant links between various complementary approaches. All kinds of materials are covered and topics that were covered include the mechanics of solid polymers, microstructures and micromechanisms and the collective behavior of defects, which looks at the interaction of multiple defects in a system.

Inverse Problems in Engineering Mechanics II G.S. Dulikravich, M. Tanaka, 2000-12-11 Inverse problems are found in many areas of engineering mechanics and there are many successful applications, e.g. in non-destructive testing and characterization of material properties by ultrasonic or X-ray techniques, thermography, etc. Generally speaking, inverse problems are concerned with the determination of the input and the characteristics of a system given certain aspects of its output. Mathematically, such problems are ill-posed and have to be overcome through development of new computational schemes, regularization techniques, objective functionals and experimental procedures. Following the IUTAM Symposium on these topics held in May 1992 in Tokyo, another in November 1994 in Paris, and also the more recent ISIP 98 in March 1998 in Nagano, it was concluded that it would be fruitful to gather regularly with researchers and engineers for an exchange of the newest research ideas. The most recent Symposium of this

series International Symposium on Inverse Problems in Engineering Mechanics ISIP2000 was held in March of 2000 in Nagano Japan where recent developments in inverse problems in engineering mechanics and related topics were discussed The following general areas in inverse problems in engineering mechanics were the subjects of ISIP2000 mathematical and computational aspects of inverse problems parameter or system identification shape determination sensitivity analysis optimization material property characterization ultrasonic non destructive testing elastodynamic inverse problems thermal inverse problems and other engineering applications The papers in these proceedings provide a state of the art review of the research on inverse problems in engineering mechanics and it is hoped that some breakthrough in the research can be made and that technology transfer will be stimulated and accelerated due to their publication
