Enterprise Resources Planning and Beyond Gary A Langenwalter,2020-01-03

To achieve success in today's business climate you must do more than provide high quality low cost products to customers when and how they want them. Customers and suppliers require fully integrated information throughout the supply chain or value chain. You must integrate your organization so completely that executive decisions are implemented effortlessly. Competitive pressures often cause a reduction in prices in spite of continually rising costs. A decrease in prices paired with increased costs quickly eliminates any profitability and threatens your company's ability to survive. This book shows you how you can reduce costs through the elimination of waste caused by poor communication and coordination throughout a company as well as between the company, its suppliers and its customers. The author explains Enterprise Resource Planning (ERP) in non-technical terms describing how an ERP system can fully integrate all functions in your manufacturing organization. He demonstrates the system's capability to increase efficiency and profitability and to delight the customer as well as its current deficiencies. In addition to his thorough coverage of ERP, the author introduces Total Enterprise Integration (TEI), the process of integrating all the information required to fully support a manufacturing company. TEI represents a logical extension of complete information integration throughout a manufacturing enterprise and into the supply chain. This new concept shows you how the intelligent use of work flow allows responsibility to go to the most appropriate front line decision makers while maintaining proper budgetary and operational controls. The power of TEI is in the integration of communication across the entire manufacturing company and out through the supply chain to customers and suppliers. *Enterprise Resource Planning and Beyond: Integrating Your Entire Organization* focuses on what a fully integrated system can do for you. **Features:** *Advanced Manufacturing Systems* Joseph Sarkis, Hamid R. Parsaei, 1999-08-19. Serving as a reference and guide to both practitioners and researchers involved in the planning, control, and management of advanced manufacturing systems. *Advanced Manufacturing Systems: Strategic Management and Implementation* offers information on a wide range of available methodologies and tools. The contents are organized into four parts: Global Strategic Issues, Evaluation, Selection, and Adoption of the Systems, Implementation Issues, and Control and Support. Theoretical and practical, analytical and empirical, this is a valuable resource for those interested in researching or implementing these systems into their organizations. **Evolution of Supply Chain Management** Yoon Seok Chang, Harris C. Makatsoris, Howard D. Richards, 2007-05-08. In the last half of the twentieth century, industry encountered a revolutionary change brought about by the harnessed power of seemingly ever-increasing capacity, speed, and functionality of computers and microprocessors. This strength provided management and workers within

industries with new capabilities for management planning and control design quality assurance and customer support Organized information flow became the mainstay of industrial companies New tools and information technology systems emerged and evolved to enable companies to integrate the various departments Design Procurement Manufacturing Sales and Finance within companies particularly the larger ones including international corporations This was to give them a chance to meet new demands for product time to market just in time supply of orders and customer support To the smaller company these changes were not so apparent Neither the tools nor systems nor indeed their economic value seemed appropriate to them except for special cases While all this was happening the structure of the larger companies began to disintegrate Strong competitive pressures and globalization of the market place brought this about Shedding unwanted competence and subcontracting it to others became common practice Regional market pressures triggered companies to reorganize to create produce and distribute goods and services Greater dependency on chains of supply from external companies became the norm Medium and smaller sized companies began to gain some advantage and at the same time some were sucked into management and control systems governed by the larger companies
