Carson, 2005-12-30 The

Mexican United States border represents much more than the meeting place of two nations Our border communities are often a line of first defense absorbing the complex economic environmental and social impacts of globalization that ripple through the region In many ways our success or failure in finding solutions for the environmental social and economic issues that plague the region may well define our ability to meet similar challenges thousands of miles from the border zone Border residents face the environmental security concerns posed by water scarcity and transboundary air pollution the planning and infrastructure needs of an exploding population the debilitating effects of inadequate sanitary and health facilities and the crippling cycle of widespread poverty Yet with its manifold problems the border area remains an area of great dynamism and hope a multicultural laboratory of experimentation and grass roots problem solving Indeed as North America moves towards a more integrated economy citizen action at the local level is pushing governments to adapt to the driving forces in the border area by creating new institutional arrangements and improving old ones If there is one defining feature of this ground up push for more responsive transboundary policies and institutions it is a departure from the closed formalistic models of the past to a more open transparent and participatory model of international interaction

At Risk Piers Blaikie,Terry Cannon,Ian Davis,Ben Wisner,2014-01-21 The term natural disaster is often used to refer to natural events such as earthquakes hurricanes or floods However the phrase natural disaster suggests an uncritical acceptance of a deeply engrained ideological and cultural myth At Risk questions this myth and argues that extreme natural events are not disasters until a vulnerable group of people is exposed The updated new edition confronts a further ten years of ever more expensive and deadly disasters and discusses disaster not as an aberration but as a signal failure of mainstream development Two analytical models are provided as tools for understanding vulnerability One links remote and distant root causes to unsafe conditions in a progression of vulnerability The other uses the concepts of access and livelihood to understand why some households are more vulnerable than others Examining key natural events and incorporating strategies to create a safer world this revised edition is an important resource for those involved in the fields of environment and development studies

The United Nations World Water Development Report 3 World Water Assessment Programme,2012-05-23 The United Nations World Water Development Report published every three years is a comprehensive review providing an authoritative picture of the state of the world s freshwater resources It offers best practices as well as in depth theoretical analyses to help stimulate ideas and actions for better stewardship in the water sector It is the only report of its kind resulting from the collaboration and contributions of the 26 UN agencies commissions program funds secretariats and conventions that have a significant role in addressing global water concerns The news media are full of talk of crises in climate change energy and food and troubled financial markets These crises are linked to each other and to water resources management Unresolved they may lead to increasing political insecurity and conflict Water is required to meet our fundamental needs and rising living standards and to sustain our planet s fragile ecosystems Pressures on the resource come from a growing and mobile

population social and cultural change economic development and technological change Adding complexity and risk is climate change with impacts on the resource as well as on the sources of pressure on water The challenges though substantial are not insurmountable The Report shows how some countries have responded Progress in providing drinking water is heartening with the Millennium Development Goal target on track in most regions But other areas remain unaddressed and after decades of inaction the problems in water systems are enormous and will worsen if left unattended Leaders in the water sector can inform decisions outside their domain and manage water resources to achieve agreed socioeconomic objectives and environmental integrity Leaders in government the private sector and civil society determine these objectives and allocate human and financial resources to meet them Recognizing this responsibility they must act now Two volume set 336
