efforts to launch a disarming first strike and to retaliate if such an attack were attempted and heavy bombers could be dispersed quickly and launched to enhance their survivability and they could be recalled to their bases if a crisis did not escalate into conflict According to unclassified estimates the number of delivery vehicles ICBMs SLBMs and nuclear capable bombers in the U S force structure grew steadily through the mid 1960s with the greatest number of delivery vehicles 2 268 deployed in 1967

Nuclear Weapons and Cooperative Security in the 21st Century Stephen J. Cimbala, 2009-09-10

This book looks at the prospects for international cooperation over nuclear weapons proliferation in the 21st century Nuclear weapons served as stabilizing forces during the Cold War or the First Nuclear Age on account of their capability for destruction the fear that this created among politicians and publics and the domination of the nuclear world order by two superpowers the United States and the Soviet Union The end of the Cold War the dissolution of the Soviet Union and the potential for nuclear weapons acquisition among revisionist states or even non state actors including terrorists creates the possibility of a wolves eat dogs phenomenon in the present century In the 21st century three forces threaten to undo or weaken the long nuclear peace and fast forward states into a new and more dangerous situation the existence of large US and Russian nuclear weapons arsenals the potential for new technologies including missile defenses and long range precision conventional weapons and a collapse or atrophy of the nuclear nonproliferation regime and the opening of the door for nuclear weapons to spread among more than the currently acknowledged nuclear states This book explains how these three weakening forces interact with one another and with US and Russian policy making in order to create an environment of large possibilities for cooperative security but also of considerable danger Instead the choices made by military planners and policy makers will create an early twenty first century story privileging nuclear stability or chaos The US and Russia can and should make incremental progress in arms control and nonproliferation This book will be of much interest to students of nuclear proliferation and arms control strategic studies international security and IR in general Stephen J Cimbala is

Distinguished Professor of Political Science at Pennsylvania State University He is the author of numerous works in the fields of international security defense studies nuclear arms control and other topics He has consulted for various US government agencies and defense contractors

Nuclear Weapons and Strategy Stephen J. Cimbala, 2006-03-10

Nuclear weapons once thought to have been marginalized by the end of the Cold War have returned with a vengeance to the centre of US security concerns and to a world bereft of the old certainties of deterrence This is a major analysis of these new strategic realities The George W Bush administration having deposed the regime of Saddam Hussein in Iraq now points to a new nuclear Axis of Evil Iran and North Korea These nations and other rogue states as well as terrorists may pose key threats because they are beyond deterrence which was based on the credible fear of retaliation after attack This new study places these and other developments such as the clear potential for a new nuclear arms race in Asia within the context of evolving US security policy Detailing the important milestones in the development of US nuclear strategy and considering the present

and future security dilemmas related to nuclear weapons this is a major new contribution to our understanding of the present international climate and the future Individual chapters are devoted to the key issues of missile defenses nuclear proliferation and Israel's nuclear deterrent This book will be of great interest to all students and scholars of strategic studies international relations and US foreign policy *Nuclear Weapons Into the 21st Century* Joachim Krause, Andreas Wenger, 2001 Bern Berlin Bruxelles Frankfurt M New York Oxford Wien 2001 National Security and Nuclear Weapons in the 21st Century Department of Defense, 2013-01-17 During the Cold War the greatest security concern of the United States was the military capabilities of the Soviet Union Potential threats from China and regional states such as North Korea were considered to be lesser included cases that could be addressed by the capabilities deployed to counter the Soviet threat The current global security environment is radically different The primary national security challenge now facing the United States is the nexus of violent extremists and regional states of concern that have or seek to attain weapons of mass destruction WMD Some governments have demonstrated a willingness to transfer advanced weapons or sensitive weapon technologies to other states or to support terrorist groups China a rapidly growing economic power and the only recognized nuclear weapons state under the Nuclear Nonproliferation Treaty NPT that is both modernizing and expanding its nuclear force is also a potential concern Concerns exist regarding Russia's modernization of its large nuclear force including the world's largest non strategic nuclear arsenal Concerns also exist with respect to recent bellicose statements from Russian leaders directed at both the United States and its allies and friends Against this backdrop both the United Kingdom and France have recently initiated programs to revitalize their nuclear complexes and maintain their nuclear forces well into the 21st century Early in his first term President Bush called for a fundamental reorientation of the United States strategic force posture In recognition of the changed security environment the President directed the Department of Defense DoD to develop a portfolio of strategic capabilities including missile defenses and advanced conventional strike assets and to size the nuclear force to meet 21st century requirements The Nuclear Posture Review NPR Report to Congress of December 2001 outlined a new policy framework to adapt U S strategy planning and forces to a rapidly changing security environment It identified the roles of and benefits provided by a strategic triad of capabilities that includes offensive capabilities nuclear non nuclear and non kinetic defenses both active and passive and a responsive infrastructure all supported by improvements in intelligence planning and command and control Even as they are reduced in numbers nuclear weapons remain an essential and enduring element of this new strategic triad and underpin in a fundamental way these new capabilities Nuclear forces continue to represent the ultimate deterrent capability that supports U S national security Extended deterrence is key to U S alliances both in the North Atlantic Treaty Organization NATO and in Asia assuring allies and friends of the credibility of U S security commitments U S nuclear weapons deter potential adversaries from the threat or use of weapons of mass destruction against the United States its deployed forces and its allies and friends In the absence of this nuclear umbrella

some nonnuclear allies might perceive a need to develop and deploy their own nuclear capability

Nuclear Strategy in the Twenty-First Century Stephen J. Cimbala, 2000-05-30 The future of nuclear weapons and nuclear strategy in the 21st century is not entirely predictable from the Cold War past Nor is it easy to foresee on the basis of what has happened since the Soviet Union collapsed in 1991 Cimbala contends that nuclear weapons and the psychology of nuclear deterrence will remain important after 2000 but the character of that importance will change No longer will nuclear weapons be the dominators of military technology Instead advanced technology conventional weapons based on information and electronics will supplant nuclear weapons as the instruments of military supremacy in the 21st century What Cimbala asks can be expected of nuclear weapons in the 21st century given what we have learned from previous experience in the Cold War and in the 1990s Cimbala expects that nuclear weapons will spread among currently non nuclear states and states with regional grievances or hegemonic aspirations will seek to deploy small nuclear forces as deterrents against neighbors or against outside intervention by the United States in regional conflicts Regional rogue states may also obtain nuclear weapons Nonetheless as Cimbala explains the international balance of power is unlikely to change As he makes clear power will be less dependent on deployed military platforms and more dependent on information warfare A thoughtful and provocative analysis that will be of particular interest to policy makers scholars and other researchers involved with arms control security studies and international relations

Reykjavik and Beyond National Academy of Sciences, Policy and Global Affairs, Office of International Affairs, Committee on International Security and Arms Control, 1988-02-01 No more important issue faces us today than the future success of efforts to manage and control nuclear arsenals Reykjavik and Beyond represents the careful consideration of this subject by a group of experts deeply involved in arms control The authors consider what changes in force structures strategic thought and political relations would be necessary to make possible large reductions in the superpowers nuclear arsenals They also examine how very deep cuts would affect other aspects of the military balance and the political and international order more broadly

The Uncertain Course Carl G. Jacobsen, 1987 This book presents the first comprehensive analysis of the strategic military and technological forces which are changing the nature and likelihood of war As the world enters the post nuclear or second nuclear age it has to take account of this revolution in military affairs which is as fundamental as the introduction of gunpowder once was The contributors explain and chart the exotic technologies such as Star Wars the Cruise Missile explosion new naval dynamics the US Army's Forward Air Land doctrine the Soviet Operational Manoeuvre Groups and Theatres of Military Strategic Operations battle management and new challenged complicating international security calculations They also take account of the fact that we have twenty first century weapons but only nineteenth century ways of thought and that computers and artificial intelligence are lessening our comprehension and control They conclude that the risk of inadvertent war is increasing even as the risk of deliberate war is diminishing
