The Strategy of Life T. Lenoir, 2012-12-06 Teleological thinking has been steadfastly resisted by modern biology. And yet in nearly every area of research, biologists are hard pressed to find language that does not impute purposiveness to living forms. The life of the individual organism, if not life itself, seems to make use of a variety of strategies in achieving its purposes. But in an age when physical models dominate our imagination and when physics itself has become accustomed to uncertainty relations and complementarity, biologists have learned to live with a kind of schizophrenic language, employing terms like selfish genes and survival machines to describe the behavior of organisms as if they were somehow purposive, yet all the while intending that they are highly complicated mechanisms. The present study treats a period in the history of the life sciences when the imputation of purposiveness to biological organization was not regarded as an embarrassment but rather an accepted fact, and when the principal goal was to reap the benefits of mechanistic explanations by finding a means of incorporating them within the guidelines of a teleological framework. Whereas the history of German biology in the early nineteenth century is usually dismissed as an unfortunate era dominated by arid speculation, the present study aims to reverse that judgment by showing that a consistent, workable program of research was elaborated by a well-connected group of German biologists and that it was based squarely on the unification of teleological and mechanistic models of explanation.

Life Strategies of Migrants from Crisis Regimes Olga Oleinikova, 2020-03-20 This book offers a profoundly new examination of life strategies of migrants from regimes in crisis. By focusing on the unique paired comparison of two opposing life strategies—the dynamic risk-taking and future-oriented achievement life strategy and the conservative risk-minimizing and survival-oriented survival life strategy—this volume takes migration from post-independence Ukraine to Australia as a central case study to show how people shape their lives in response to regime transitions and crises: what life strategies individuals pursue to cope with social change and why these individuals chose migration to Australia. Ultimately, the book compels us to reassess what we mean by migration and regime

crisis in order to adequately respond to the global challenges confronting numerous democracies today As such it will appeal to scholars of sociology and politics with interests in migration political theory and democracy

The Other Half of Life Dr Pooran Latchman,2015-12-22 Life of a boy who grew up in a situation that provided barely enough of the basic necessities of life With a strongly determined father caring mother and dependable siblings he was able to carve out a life that was fashioned from the dreams he carried in his childhood In his latter life he found himself in a situation that allowed him to go back to his youthful dreams At 62 while still strong and healthy and with the realization that he was no longer tied to any form of obligation towards the world or to anyone else he retired With a determination recaptured from his youth he now wants to probe into the further reaches of his being to see just how far he can go This latter part of life that he could not have foreseen is what he refers to as The Other Half of Life It is to be different from the first half where it had been simply going through the functions of the everydayness of life He now finds himself in a situation that has no constraints and no limitations This awareness of absolute freedom to design his life in whatever way he chooses now engulfs his being and propels him to become that for which he was made to be It had all been laid out in the dreams of his childhood

Inevitable Aging? Annette Baudisch,2008-01-08 Aging is inevitable this is gerontological dogma And humans do inevitably grow old which is probably why it seems so unlikely to us that other forms of life could escape aging Escaping aging is not escaping death Death is an inherent part of life and it can strike any time But the question is whether death necessarily becomes more likely as life proceeds And it does not The theoretical results in this monograph indicate that life provides alternative strategies While some organisms will deteriorate over adult ages for others mortality appears to fall or remain constant at least over an extended period of life after reproductive maturity This is empirically observed especially for species that keep on growing during adult ages Perhaps the diversity of aging matches the diversity of life My thesis the central insight of this monograph is to deeply understand why some species age it is necessary to understand why other species do not

The Strategy of Life Timothy Lenoir, 1989-04-25 In the early nineteenth century a group of German biologists led by Johann Friedrich Blumenbach and Karl Friedrich Kielmeyer initiated a search for laws of biological organization that would explain the phenomena of form and function and establish foundations for a unified theory of life The tradition spawned by these efforts found its most important spokesman in Karl Ernst von Baer Timothy Lenoir chronicles the hitherto unexplored achievements of the practitioners of this research tradition as they aimed to place functional morphology at the heart of a new science which they called biology Strongly influenced by Immanuel Kant the biologists approach combined a sophisticated teleology with mechanistic theories and sparked bitter controversies with the rival programs mechanistic reductionism and Darwinism Although temporarily eclipsed by these two approaches the morphological tradition Lenoir argues was not vanquished in the field of scientific debate It contributed to pathbreaking research in areas such as comparative anatomy embryology paleontology and biogeography
