Strategy Of Life:

The Strategy of Life Arthur Porritt, 1920 The Strategy of Life T. Lenoir, 1982-09-30 Teleological thinking has been steadfastly resisted by modern biology And yet in nearly every area of research biologists are hard pressed to find language that does not impute purposiveness to living forms The life of the individual organism if not life itself seems to make use of a variety of strate gems in achieving its purposes But in an age when physical models dominate our imagination and when physics itself has become accustomed to uncertainty relations and complementarity biologists have learned to live with a kind of schizophrenic language employing terms like selfish genes and survival machines to describe the behavior of organisms as if they were somehow purposive yet all the while intending that they are highly complicated mechanisms The present study treats a period in the history of the life sciences when the imputation of purposiveness to biological organization was not regarded an embarrassment but rather an accepted fact and when the principal goal was to reap the benefits of mechanistic explanations by finding a means of incorporating them within the guidelines of a teleological framework Whereas the history of German biology in the early nineteenth century is usually dismissed as an unfortunate era dominated by arid speculation the present study aims to reverse that judgment by showing that a consistent workable program of research was elaborated by a well connected group of German biologists and that it was based squarely on the unification of teleological and mechanistic models of explanation An Astrobiology Strategy for the Search for Life in the Universe National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Astrobiology Science Strategy for the Search for Life in the Universe, 2019-04-20 Astrobiology is the study of the origin evolution distribution and future of life in the universe It is an inherently interdisciplinary field that encompasses astronomy biology geology heliophysics and planetary science including complementary laboratory activities and field studies conducted in a wide range of terrestrial environments Combining inherent scientific interest and public appeal the search for life in the solar system and beyond provides a scientific rationale for many current and future activities carried out by the National Aeronautics and Space Administration NASA and other national and international agencies and organizations Requested by NASA this study offers a science strategy for astrobiology that outlines key scientific questions identifies the most promising research in the field and indicates the extent to which the mission priorities in existing decadal surveys address the search for life s origin evolution distribution and future in the universe This report makes recommendations for advancing the research obtaining the measurements and realizing NASA s goal to search for signs of life in the universe *The High-Impact Blueprint to Success - The Strategy for an Extraordinary Life* Simone Janson, 2025-06-02 Also in the 2nd revised and improved edition published by a government funded publisher involved in EU programs and a partner of the Federal Ministry of Education you receive the concentrated expertise of renowned experts overview in the book preview embedded in an integrated knowledge system with premium content and 75% advantage At the
