Domínguez,2008 Soil contamination is the presence of man made chemicals or

other alteration in the natural soil environment This type of contamination typically arises from the rupture of underground storage tanks application of pesticides percolation of contaminated surface water to subsurface strata leaching of wastes from landfills or direct discharge of industrial wastes to the soil The most common chemicals involved are petroleum hydrocarbons solvents pesticides lead and other heavy metals This occurrence of this phenomenon is correlated with the degree of industrialisation and intensity of chemical usage The concern over soil contamination stems primarily from health risks both of direct contact and from secondary contamination of water supplies Mapping of contaminated soil sites and the resulting cleanup are time consuming and expensive tasks requiring extensive amounts of geology hydrology chemistry and computer modelling skills This book presents the latest research from around the world in this field **Hydraulics in Civil and Environmental Engineering, Fourth Edition** Andrew Chadwick, John Morfett, Martin Borthwick, 2004-05-27 Find out more about Hydraulics in Civil and Environmental Engineering Fifth Edition on CRC Press at <http://www.crcpress.com/product/isbn/9780415672450> **Water Science and Technology** Nicholas Gray, 2017-04-07 Water has become one of the most important issues of our time intertwined with global warming and population expansion The management of water supplies and the conservation of water resources remains one of the most challenging yet exciting issues of our time Water and wastewater treatment technologies are constantly evolving creating an increasingly sustainable industry that is one of the world's largest and most interdisciplinary sectors employing chemists microbiologists botanists zoologists as well as engineers computer specialists and a range of different management professionals This accessible student textbook introduces the reader to the key concepts of water science and technology by explaining the fundamentals of hydrobiology aquatic ecosystems water treatment and supply wastewater treatment and integrated catchment management This fourth edition is extensively changed throughout with new coverage of the effects of climate change environmental assessment sustainability and the threat to biodiversity The text serves as a primer for both undergraduate and graduate students in either science or engineering who have an interest in freshwater biology hydrobiology or environmental engineering It is also useful as a unified transitional course for those who want to span the traditional areas of engineering biology chemistry microbiology or business Professionals and consultants will also find the book a useful reference *Wastewater Management for Coastal Cities* Charles G. Gunnerson, Jonathan A.
