The Syntax of City Space Mark David Major, 2018-03-14 Many people see American cities as a radical departure in the history of town planning because of their planned nature based on the geometrical division of the land. However, other cities of the world also began as planned towns with geometric layouts, so American cities are not unique. Why did the regular grid come to so pervasively characterize American urbanism? Are American cities really so different? *The Syntax of City Space* American Urban Grids by Mark David Major with Foreword by Ruth Conroy Dalton, co-editor of *Take One Building* answers these questions and much more by exploring the urban morphology of American cities. It argues American cities do represent a radical departure in the history of town planning while simultaneously still being subject to the same processes linking the street network and function found in other types of cities around the world. A historical preference for regularity in town planning had a profound influence on American urbanism which endures to this day. Proceedings of the American Society of Civil Engineers American Society of Civil Engineers, 1927 Vols for Jan 1896 Sept 1930 contain a separately page section of Papers and discussions which are published later in revised form in the society's Transactions. Beginning Oct 1930 the Proceedings are limited to technical papers and discussions while Civil engineering contains items relating to society activities etc. *Pollutant Dispersion in Built Environment* Tingzhen Ming, Chong Peng, Tingrui Gong, Zhengtong

Landscapes of Communism Owen Hatherley,2015-06-04 In the craven world of architectural criticism Hatherley is that rarest of things a brave incisive elegant and erudite writer whose books dissect the contemporary built environment to reveal the political fantasies and social realities it embodies Will Self During the course of the twentieth century communism took power in Eastern Europe and remade the city in its own image Ransacking the urban planning of the grand imperial past it set out to transform everyday life its sweeping boulevards epic high rise and vast housing estates an emphatic declaration of a non capitalist idea Now the regimes that built them are dead and long gone but from Warsaw to Berlin Moscow to post Revolution Kiev the buildings their most obvious legacy remain populated by people whose lives were scattered and jeopardized by the collapse of communism and the introduction of capitalism *Landscapes of Communism* is an intimate history of twentieth century communist Europe told through its buildings it is too a book about power and what power does in cities In exploring what that power was Hatherley shows how much we can understand from surfaces especially states as obsessed with surface as the Soviets were Walking through these landscapes today Hatherley discovers how in contrast to the common dismissal of monolithic Soviet architecture these cities reflect with disconcerting transparency the development of an idea over the decades with its sharp sudden zigzags of official style from modernism to classicism and back to the superstitious despotic rococo of high Stalinism with its jingoistic
