Streptocarpus An African Plant Study:

Streptocarpus: an African Plant Study Olive Mary Hilliard, B. L. Burt, 1971 Cell and Developmental Biology of Arabinogalactan-Proteins Eugene A. Nothnagel, Antony Bacic, A.E. Clarke, 2012-12-06 Arabinogalactan proteins are distributed throughout the plant kingdom and are present in leaves stems roots floral parts and seeds At the subcellular level AGPs are localized on the plasma membrane in the cell wall in secretory and endocytotic pathway organelles in stylar and root secretions and in the medium of cultured cells The widespread distribution of AGPs indicates that they perform important functions An expansion of knowledge regarding AGPs has been initiated and sustained through new experimental approaches including the development of monoclonal antibody probes and cloning of cDNAs corresponding to core polypeptides Regulated expression and other evidence points to the involvement of AGPs in plant reproductive development pattern formation and somatic embryogenesis as well as in the processes of cell division cell expansion and cell death AGPs also have an importance to industry One example is gum arabic an exudate from *Acacia senegal* a mixture of AGPs and polysaccharides which has unique viscosity and emulsifying properties that have led to many uses in the food as well as other industries

Applied Mutation Breeding for Vegetatively Propagated Crops C. Broertjes, A.M. van Harten, 2013-10-22 When the first edition of this book appeared in 1978 it was warmly received Most readers and reviewers especially valued the extensive coverage of the literature in the chapters dealing with the different crops a valuable and timely addition to plant breeders and of outstanding value to breeders of ornamental plants The book's special strength resides in the extensive review of literature International Journal for Breeding Research This is also reflected by the many times that the work has been referred to in other publications This new edition provides plant breeders as well as scientists with an up to date overview of methods and results of the application of mutation breeding in order to genetically improve vegetatively propagated crops General principles and background information about mutation breeding in general methods of treatment material to be treated and results are discussed in the introductory chapters followed by a description of the specific situation in each of the vegetatively propagated crops ever used in a mutation breeding project This volume brings together all the important and relevant literature in the field It provides a complete account of mutation breeding of vegetatively produced crops presenting conclusions about the value of the method its possibilities limitations and shortcomings and the possible difficulties of further application in various crops The initial chapters deal with the interactions between mutagenic treatment and plant material such as aspects of mutagenic treatment post irradiation behaviour of shoot apices and adventitious bud techniques All available literature is then discussed crop by crop and critically evaluated Almost 1700 references are covered and whenever possible suggestions for more efficient application of mutation breeding methods are given

Application of Mutation Breeding Methods in the Improvement of vegetatively propagated crops V2 C. Broertjes, 2012-12-02 Application of Mutation Breeding Methods in the Improvement of Vegetatively Propagated Crops An

Interpretive Literature Review summarizes advances in the use of artificially induced mutations to improve cultivated plants particularly those that are vegetatively propagated It brings together all available and accessible references that examine the advantages drawbacks and possibilities of the mutation breeding method as well as the challenges that prevent it from being applied to various crops Comprised of eight chapters this volume begins with an overview of various aspects of mutagenic treatment using chemical and physical mutagens It then discusses the structure and functioning of shoot apices and their behavior after irradiation adventitious bud techniques and other in vivo or in vitro methods of asexual propagation and breeding of root and tuber crops such as cassava and potato ornamental crops such as foliage plants and cut flowers fruit crops and other crops Plant breeders who want to better understand how to apply mutation breeding to their crops will find this book extremely helpful

Werger, A.C. van

Bruggen, 2012-12-06 Southern Africa is certainly not a naturally bounded area so that there are several possibilities for delineating it and concepts about its extent Wellington discussed the various possibilities for delineation and suggested that one line stands out more clearly and definitely as a physical boundary than any other namely the South Equatorial Divide the watershed between the Zambezi and Rufiji Rivers on the one hand and the Zambesi Kunene and Rovuma Rivers on the other This South Equatorial Divide is indeed a major line of separation for some organisms and is also applicable in a certain geographical sense though it does not possess the slightest significance for many other groups of organisms ecosystems or geographical and physical features of Africa The placing of the northern boundary of southern Africa differs in fact strongly per scientific discipline and is also influenced by practical considerations regarding the possibilities of scientific work as subordinate to certain political realities and historically grown traditions This is illustrated for example in such works as the

Flora of Southern Africa where the northern boundary of the area is conceived as the northern and eastern political boundaries of South West Africa South Africa and Swaziland Botswana traditionally included in the area covered by the Flora Zambesiaca thus forms a large wedge in Southern Africa **Index Holmiensis: Dicotyledoneae Q,R,S** Hans Tralau,1969
