impact of rapid industrialization the origins of the world wars the question of war guilt the decade of Weimar democracy and the rise and fall of Hitler Gatzke looks anew at the economic miracle in West Germany and the consequences of making prosperity the cornerstone of a new republic      **The 20th Century O-Z** Frank N. Magill, 2013-05-13 Each volume of the Dictionary of World Biography contains 250 entries on the lives of the individuals who shaped their times and left their mark on world history This is not a who's who Instead each entry provides an in-depth essay on the life and career of the individual concerned Essays commence with a quick reference section that provides basic facts on the individual's life and achievements The extended biography places the life and works of the individual within an historical context and the summary at the end of each essay provides a synopsis of the individual's place in history All entries conclude with a fully annotated bibliography      **The Civil-Military Fabric of Weimar Foreign Policy** Gaines Post, Jr., 2015-03-08 In the historiographic debate over Germany's responsibility for the outbreak of the two world wars little attention has been paid to German politico-military activity in the Weimar Republic Although Weimar diplomats and military leaders emphasized the interconnection and developed ideas and procedures for joint planning historians have usually treated the foreign and military affairs of the republic separately Gaines Post Jr however examines the relationship between foreign policy and military planning and charts its directions and changes to develop a model of German civil-military relations which sheds light on the general problem of modern civil-military relations He shows that diplomats and military leaders shared assumptions about the role of force in foreign policy and the subordination of the military arm to the political leadership and that they collaborated in assessing Germany's strategic situation in rearmament and in operational exercises In the 1920's interdepartmental cooperation between the foreign office and the Defense Ministry became the foundation of a stable system of civil-military relations The system broke down during the crisis period of 1930-1933 because of mounting institutional pressures The author demonstrates how in both periods civilian and military leaders viewed military force not simply as an instrument of national self-defense but as an acceptable means of attaining national goals above all the revision of the German-Polish borders Originally published in 1973 The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905      *The Origins of Major War* Dale C. Copeland, 2013-02-15 One of the most important questions of human existence is what drives nations to war especially massive system-threatening war Much military history focuses on the who when and where of war In this riveting book Dale C Copeland brings attention to bear on why governments make decisions that lead to sustain and intensify conflicts Copeland presents detailed historical narratives of several twentieth-century cases including World War I World

War II and the Cold War He highlights instigating factors that transcend individual personalities styles of government geography and historical context to reveal remarkable consistency across several major wars usually considered dissimilar The result is a series of challenges to established interpretive positions and provocative new readings of the causes of conflict Classical realists and neorealists claim that dominant powers initiate war Hegemonic stability realists believe that wars are most often started by rising states Copeland offers an approach stronger in explanatory power and predictive capacity than these three brands of realism he examines not only the power resources but the shifting power differentials of states He specifies more precisely the conditions under which state decline leads to conflict drawing empirical support from the critical cases of the twentieth century as well as major wars spanning from ancient Greece to the Napoleonic Wars
