Stretching The Imagination Representation And Transformation In Mental Imagery:

Stretching the Imagination Cesare Cornoldi, 1996 This is the first volume in the Counterpoints Series which explores the issues being debated in psychology child development linguistics and neuroscience Each volume consists of the presentation of three or four extensive chapters by researchers representing key points of view on the issue This text examines one of the liveliest areas of debate in psychology today the relationship between perception and mental imagery A variety of recent studies have pointed to the existence of a strong relationship between memory and mental representation while others have shown that images are open to reinterpretation and manipulation and are therefore not merely static impressions or mental representations of memories Three core chapters by researchers in the midst of this debate Maria Brandimonte Geir Kaufmann and Dan Reisberg make up the central portion of this text The first chapter is a historical overview of the problem as well as a review of the research in psychology and the argument as it has developed in related fields such as philosophy and artificial intelligence The last chapter pulls together all of the positions and points to new areas of research which may help uncover an explanation for the apparent contradictions in the research Students and researchers in psychology and cognitive psychology will benefit from this comprehensive look at this heated debate

Cesare Cornoldi, 1996 **Imagery in Working Memory and in Mental Discovery** Tore Helstrup, Robert H. Logie, 1999 A special issue of European journal of cognitive psychology Teaching Literature and Language Through Multimodal Texts Domínguez Romero, Elena, Bobkina, Jelena, Stefanova, Svetlana, 2018-08-17 In the past few decades there has been a growing interest in the benefits of linking the learning of a foreign language to the study of its literature However the incorporation of literary texts into language curriculum is not easy to tackle As a result it is vital to explore the latest developments in text based teaching in which language culture and literature are taught as a continuum Teaching Literature and Language Through Multimodal Texts provides innovative insights into multiple language teaching modalities for the teaching of language through literature in the context of primary secondary and higher education It covers a wide range of good practice and innovative ideas and offers insights on the impact of such practice on learners with the intention to inspire other teachers to reconsider their own teaching practices It is a vital reference source for educators professionals school administrators researchers and practitioners interested in teaching literature and language through multimodal texts

Spatial Working Memory André Vandierendonck, Arnaud Szmalec, 2014-02-04 Spatial working memory is the ability to remember the location in which something is perceived and in addition the ability to recall a series of visited locations In this book top researchers in the domain of spatial working memory review and discuss findings about the processes and memory structures which underlie the ability to store and use spatial information The first part of the book provides an examination of the working memory system looking at the behavioural and neural processes involved in working with visuo spatial information and how these can constrain the hypotheses that are generated It also addresses methodological questions for

example looking at how the use of the appropriate method can ensure that the observed data are as informative as possible about the underlying structures The remaining chapters focus on specific problems to do with spatial working memory such as how the working memory system can handle individual differences in representing spatial interactions how the visuospatial system can support and interact with the environment and the verbal system and how understanding these systems can shed light on the development of particular skills in children with developmental disorders With contributions from leading international figures in the field this book is the first to address the topic of spatial working memory from a range of theoretical and methodological perspectives As such it will serve as an indispensable tool for students and researchers interested in working memory

Fear of Jung Theo A. Cope, 2018-04-17 The current neuroscientific research in the field of emotion studies highlights a paradigm of scientific research that must be categorized as functional science As functional science the neuroscientific theory of the neuron doctrine combined with a Jungian theory of the complex doctrine hold significant potential for a natural human science and a psychological study of affectivity Though researchers utilize psychological constructs similar to those proposed by Carl Jung there appears to be a fear of Jung that is a professional fear of invoking Jung's name or his psychological research One familiar with Jung's works notice similar terminology ideas and even conclusions The marginalization and neglect of Jung's psychological insights from a serious empirical scientific approach to psychology is due to many factors Jung did not reduce psychological experience to the body or brain a reductive science does not consider seriously the reality of the psyche This work is an initial contribution to a psychological and neurological study of personal emotional experience

Models of Visuospatial Cognition Manuel de Vega, 1996-05-23 This second volume in the Counterpoints Series which explores issues in psychology child development linguistics and neuroscience focuses on alternative models of visual spatial processing in human cognition This text offers extended chapters from three of the most respected and recognized investigators in the field Michel Denis Margaret Intons Peterson and Philip Johnson Laird Denis considers the role of mental imagery in spatial cognition and topographical orientation images are viewed as a form of mental representation that is similar to real world objects Intons Peterson examines spatial representation in short term or working memory considering the relationship of visual spatial processes to subjects expectations and individual differences Johnson Laird approaches the issue of visual spatial representation from a mental models perspective considering the relationship of images to various cognitive events The editors provide a historical and theoretical introduction and a final chapter integrates the arguments of the chapters offering ideas about new directions and new research designs

The Oxford Handbook of the Development of Imagination Marjorie Taylor, 2013-04-02 Children are widely celebrated for their imaginations but developmental research on this topic has often been fragmented or narrowly focused on fantasy However there is growing appreciation for the role that imagination plays in cognitive and emotional development as well as its link with children's understanding of the real world With their imaginations children

mentally transcend time place and or circumstance to think about what might have been plan and anticipate the future create fictional relationships and worlds and consider alternatives to the actual experiences of their lives The Oxford Handbook of the Development of Imagination provides a comprehensive overview of this broad new perspective by bringing together leading researchers whose findings are moving the study of imagination from the margins of mainstream psychology to a central role in current efforts to understand human thought The topics covered include fantasy reality distinctions pretend play magical thinking narrative anthropomorphism counterfactual reasoning mental time travel creativity paracosms imaginary companions imagination in non human animals the evolution of imagination autism dissociation and the capacity to derive real life resilience from imaginative experiences Many of the chapters include discussions of the educational clinical and legal implications of the research findings and special attention is given to suggestions for future research **Stylistic**
