Émile Durkheim and the Birth of the Gods Alexandra Maryanski, 2018-06-18 The Birth of the Gods is

dedicated to Durkheim's effort to understand the basis of social integration. Unlike most social scientists then and now, Durkheim concluded that humans are naturally more individualistic than collectivistic; that the primal social unit for humans is the macro-level unit, the horde, rather than the family; and that social cohesion is easily disrupted by human self-interest. Hence, for Durkheim, one of the gravest problems facing sociology is how to mold these human proclivities to serve the collective good. The analysis of elementary religions, Durkheim believed, would allow social scientists to see the fundamental basis of solidarity in human societies built around collective representations, totems marking sacred forces and emotion arousing rituals directed at these totems. The first half of the book traces the key influences and events that led Durkheim to embrace such novel generalizations. The second part makes a significant contribution to sociological theory with an analysis that essentially tests Durkheim's core assumptions using cladistic analysis, social network tools, and theory and data on humans' closest living relatives, the great apes. Maryanski marshals hard data from primatology, paleontology, archaeology, genetics, and neuroscience that enlightens and surprisingly confirms many of Durkheim's speculations. These data show that integration among both humans and great apes is not so much group or kin oriented per se but orientation to a community standing outside each individual that includes a sense of self but also encompassing a cognitive awareness of a sense of community or a connectedness that transcends sensory reality and concrete social relations. This community complex, as Maryanski terms it, is what Durkheim was beginning to see, although he did not have the data to buttress his arguments as Maryanski is able to do.

Migration Strategies of Birds of Prey in Western Palearctic Michele Panuccio, Ugo Mellone, Nicolantonio Agostini, 2021-07-28. Given their roles in the ecosystem, raptors are widely considered the flagship or umbrella species among birds. Most species undertake a seasonal journey that is impressive because of the length and the imposing natural barriers such as deserts and seas that they fly over. The migration of birds of prey has unique characteristics in the animal world because of their morphology and flight style. The flying path of Afro-Palearctic migrants between breeding and wintering grounds is determined by several factors such as morphology of the birds, geography, behavioural adaptations. The book analyses the migration patterns of raptors along the Afro-Palearctic migratory system and summarizes the recent research on these top predator species. Behavioural adaptations such as the importance of social interactions and the modulation of the different flight styles, as well as ecological interactions with the encountered environment and weather conditions en route, are described in the book. Moreover, the impact of climate change on the migratory behaviour and key conservation issues are discussed. The book provides an overview of the migratory characteristics and flyway patterns of all European raptor species and also some Asian ones. These chapters have been written by some of the most important raptor specialists, giving a complete picture of the different migration strategies on the basis of both traditional methods and new technologies.

comprehensive analysis of social activism during this period of Taiwan's political history. It focuses on causal mechanisms and variation and thus avoids the tautological trap of finding an improving political opportunity structure wherever a social movement is flourishing. Drawing on extensive data from over 140 activists' demographic backgrounds, the discussion also builds upon existing studies of the biographical aspects of contention. This study then asks further questions about how certain tactics are chosen, not only how a repertoire of contention comes to have the shape it does. Combining both a theoretical and an empirical approach, this book will be useful to students and scholars of Taiwanese politics and society as well as social movements and democracy more generally. *Urban Geography* David Kaplan, Steven Holloway, 2024-07-18

Incorporating the most recent research in urban studies, authors David H. Kaplan and Steven R. Holloway provide an overview of the dynamic field, introduce key elements of urban theory and methodology, analyze issues of immigration, ethnicity, and urbanism, and more. Exploring the urban experience in a global context, 16 student-friendly chapters address urbanization processes, industrial urbanization, discrimination in the housing market, gentrification, metropolitan governance, urban planning, geographical and political fragmentation, urban immigration, urban economic restructuring, and more. Each chapter includes an introductory road map, learning objectives, definitions of key terms, discussion questions, and suggestions for research topics and activities. The fourth edition of *Urban Geography* contains two entirely new chapters on urban transportation and the relationship between cities and the environment, including climate change and natural disasters. New discussion of the impact of COVID-19 and other health aspects of cities is accompanied by new data, new figures, new themes, and new pedagogical tools. In this edition, the authors present traditional models of urban social space and new factors that organize intra-urban space, such as globalization and postmodernism. Examining cities in the developed world and in less developed regions, *Urban Geography*, Fourth Edition, is the ideal textbook for Urban Geography classes and related courses in Urban Studies, Sociology, and Political Science programs. **Shaking Heaven and Earth** Walter Brueggemann, Christine Roy Yoder, Charles B.
