Jerke, 1972 The effects of aging vacuum exposure and thermal cycling on the dimensional stability of mirror substrate materials fused silica Cer Vit Kanigen coated beryllium polycrystalline silicon and U L E fused silica were investigated A multiple beam interferometer was used to determine nonrecoverable surface shape changes of the 12 7 cm diameter mirrors with substrates of these materials Thermal cycling and aging in vacuum produced the largest changes but only a few were as large as 1 30 wavelength where the wavelength was 632 8 nm **Thermal** Design and Test Results for SUNLITE Ultra-stable Reference Cavity Ruth M. Amundsen, 1991 Animal-friendly methods for rodent behavioral testing in neuroscience research Raffaele d'Isa, Stefania Fasano, Riccardo Brambilla, 2024-07-03 Rodent behavioral testing has been used to study brain functions since the 1890s and has become a gold standard model in modern neuroscience Up to the 1950s most behavioral tests on laboratory rodent models were based on punishments and rewards Both approaches can lead to a certain degree of animal pain or suffering Punishments involved the employment of painful stimuli typically electric shocks Passive avoidance and fear conditioning tests among the most widely used behavioral paradigms used to evaluate learning and memory in rodents can be performed using only a single brief shock Other tests such as the active avoidance might require up to tens or hundreds of shocks strongly challenging the psychological welfare of the model animals On the other hand tests based on rewards which apparently may seem more ethical actually still induce suffering in the animals as food rewards are almost always associated with a food restriction protocol in order to motivate food seeking behavior Rodents are starved for days before starting the test and kept under food restriction for the whole duration of the test The distress during the testing session is only a minimal part compared to the stress lived outside of the testing session which is prolonged and continuous Analogously liquid rewards commonly rely on a previous water restriction protocol to use thirst as motivation Animal stress is not only an ethical issue per se but also an important factor potentially impacting on the reliability and reproducibility of experimental results Transactions of the American Institute of Electrical Engineers ,1915 Handbook of Testing Materials Adolf Martens,1899 Astronomical Optics Daniel J.
