**Trusted Computing** Bing Xie, Juergen Branke, Masoud Sadjadi, Daqing Zhang, Xingshe Zhou, 2010-10-08 Computing systems including hardware software communication and networks are becoming increasingly large and heterogeneous. In short they have become increasingly complex. Such complexity is getting even more critical with the ubiquitous permeation of embedded devices and other pervasive systems. To cope with the growing and ubiquitous complexity, autonomic computing (AC) focuses on self-manageable computing and communication systems that exhibit self-awareness, self-configuration, self-optimization, self-healing, self-protection, and other self-properties to the maximum extent possible without human intervention or guidance. Organic computing (OC) additionally addresses adaptability, robustness, and controlled emergence, as well as nature-inspired concepts for self-organization. Any autonomic or organic system must be trustworthy to avoid the risk of losing control and retain confidence that the system will not fail. Trust and/or distrust relationships in the Internet and in pervasive infrastructures are key factors to enable dynamic interaction and cooperation of various users, systems, and services. Trusted trustworthy computing (TC) aims at making computing and communication systems, as well as services, available, predictable, traceable, controllable, assessable, sustainable, dependable, persistent, security, privacy, protectable, etc. A series of grand challenges exists to achieve practical autonomic or organic systems with truly trustworthy services. Started in 2005, ATC conferences have been held at Nagasaki, Japan; Vienna, Austria; Three Gorges, China; Hong Kong, China; Oslo, Norway; and Brisbane, Australia. The 2010 proceedings contain the papers presented at the 7th International Conference on Autonomic and Trusted Computing (ATC 2010) held in Xi'an, China, October 26-29, 2010.

**The Trouble with Trust** Frédérique Six, 2008-01-01 The Trouble with Trust poses the question: if trust is considered to be important for successful cooperation, why don't high-trust work relationships predominate? Part of the explanation the author argues is that it is particularly difficult to build and maintain trust in work relations.
