

Evolution of Forces

Scientists also hold the belief that all the four forces were of the same origin in the beginning of the universe. In the course of time, the original force evolved, the various force emerged and became independent.

The Grand Unified Theory Of Physics:

The Grand Unified Theory of Physics Joseph M. Brown, 2004-01-01 **The Grand Unified Theory of Classical Physics** Randell L. Mills, 2011 **The Grand Unification Theory** H. Kuno, 2018-03-19 To tell the conclusions first the present theory represents the final unification theory on the universe dimensions although it may not be understood instantly represents the truth of the universe in parallel with the superstring theory and the M theory and is the blueprint of the Universe that assumes a major pillar of the Grand Unified Theory GUT The present theory allows the human being to have the entire image of the Universe can explain any and all problems of physics that have remained unsolved to date clarifies the dimension structures of the Universe and is coherent and unique beyond comparison Furthermore the present theory demonstrates its consistency with the superstring theory and the M theory by simply assuming the 5th or greater dimensions in such a manner to meet the definitions and conditions of the conventional 4th or lower dimensions while considering the universe dimensions as the entropy expanding receptacle In addition to these benefits the present theory can provide discrepancy free coherent theoretical explanations for a diversity of unsolved problems of cosmophysics e g the Big Bang inflation model the membrane universe theory black hole spacetime dark matter dark energy compatibility of the particle and wave natures of quanta infinite superimposition of time reversal spacetime and antimatter all field theories conditions for existence of elementary particles in the dimensions the GUT of matters and force and others I consider that the further introduction of The Unified Theory of the Universe Dimensions and The Unified Dimension Elementary Particles Theory will provide coherent explanations for sorts of conventional unsolved problems of cosmophysics The final conclusions of this series of articles are the following 1 golden symmetry exists in the 0th to 10th dimensions of the universe 2 the universe vacuum originally consisted of 10th dimension and 3 our cosmos exists in the 4th dimension in which the 7th to 10th dimensions in forward direction are superimposed infinitely while being influenced by the graviton of the 10th dimension The universe that is observed or calculated from the 4th dimension produces the biased view of dimensions for the phenomena of five or greater dimensions because dimensional complementation occurs Namely we observe through the window of the 4th dimensional spacetime elementary particles in the 7th to 10th dimensions that have coexisted from the beginning Cosmophysics in the future will need to discuss five or greater dimensions by stratum The present theory is the final unification theory on the universe dimensions is in parallel with the superstring theory and the M theory and constitutes a major pillar of the GUT Rather the present theory constitutes the GUT and contains a number of the rules and theorems of everything that may cause the paradigm shift in conventional cosmophysics and becomes the legacy that is critically important and unique beyond comparison for the human being To repeat the statement the present theory can explain many problems of physics that have remained unsolved to date can elucidate the dimensional structure of the universe and tells the truth of the Universe without discrepancy The present theory which I coined The Unified Theory of the Universe Dimensions

UTUD provides the most beautiful universal symmetry that theoretical physicists and mathematicians have sought for Furthermore the UTUD does not require any of the arbitrary setting of parameters the unreasonable renormalization of infinite terms anthropic principle based ideas etc The Universe has only one pattern of the 10th dimension and the relationship of our cosmos of the 4th dimension the Cosmos with 10th dimensional spacetime is determined uniquely And I assumed only the five items The Grand Unified Theory Chaul Ryu,2004 The Grand Unified Theory is the unification theory of the four fundamental forces of nature gravity electromagnetism strong nuclear force and weak nuclear force It is through the interactions between these four forces of nature that everything in our universe is created including our DNA and the cells that compose our body Einstein spent much of the later part of his life trying to unify these forces but without success The grand unified theory is also called the theory of everything because it is supposed to answer many fundamental questions about our universe The questions such as why does our universe exist Why is our universe composed of three dimensional space and not five or six What is energy Why is there conscious life in our universe What is the function of life in the universal order *The Grand Unified Theory of Classical Quantum Mechanics* Randell L. Mills,2000-01-01 *Grand Unified Theorem* G. A. Oyibo,1999 Oyibo mathematics of APPIT Institute of Technology presents a general theorem providing a mathematical basis for a Grand Unified Field Theory and shows that the proof of the theorem is the recent work Generalized Mathematical Proof of Einstein s Theory Using a New Group Theory He suggests that the solution mathematically represents the modification of space time predicted by Einstein s general relativity theory He also investigates some hydrodynamic examples of subsets of the general universal conservation equations *THE HYBRID GRAND UNIFIED THEORY* E. Escultura,V. Lakshmikantham,2009-03-01 In this book an attempt is made to provide a hybrid grand unified theory to understand the universe both in its micro quantum aspects as well as macro galactic aspects The book describes a truly hybrid theory as it encompasses both the modern and ancient theories of the universe together with its functioning at all levels of human comprehension One of its authors Dr Escultura was nominated in 2005 for a Nobel Prize for his flux theory of gravitation From then on this theory has been improved clarified and is now known as the hybrid grand unified theory This book deals with this new bold theory unifying mathematics and physics and answering some open fundamental questions and paradoxes in these disciplines The book also describes what the ancient scientists knew about these matters *Grand Unified Theory Made Easy* Charles R. Storey,2023-04-26 Charles R Storey s theory which he has shared with Stephen Hawking and other prominent physicists is explained here in detail Lumeniferous Ether Theory and other theories are examined in depth and included in a unified field theory which interconnects electricity magnetism and gravity Our current method of space travel will require an enormous amount of time and effort to explore and colonize celestial bodies relatively close to earth A unified theory which brings our understanding of relativity and quantum theory together into one complete systems of thought may broaden our perceptions regarding our space time continuum and may

also provide us with an entirely new system of space travel Highlights of the Grand Unified Theorem G. A. Oyibo,2001

book filled with anecdotes and disarming stories Zee discusses phenomena ranging from the emergence of galaxies to the curvature of space time evidence for the existence of gravity waves and the shape of the universe at creation and today 52 halftones line illustrations **First Workshop on Grand Unification** FRAMPTON,2012-12-06 This workshop held at the

New England Center provided a timely opportunity for over 100 participants to gather in a unique environment and discuss the present status of the unification of strong and electroweak forces One reason for the timeliness was perhaps that experiments of the seventies had already lent confirmation to the separate theories of strong and of electroweak forces so that for the eighties it now seems especially compelling to attempt the grand unification of these two forces Also the planned experiments to search for proton decay and the new experiments which are suggestive though not yet conclusive of non zero neutrino rest masses add further stimulus to the theory Thus the workshop provided an ideal forum for exchange of ideas amongst active physicists The presentations at the workshop covered the present status of both theory and experiment with a strong interplay Also there were presentations from the discipline of astrophysics which is becoming very intertwined with that of high energy physics especially when in the latter one is addressing energies and temperatures that were extant only in the first nanosecond of the universe On experiment we heard a comprehensive coverage of the four United States proton decay experiments The Brookhaven Irvine Michigan experiment in the Morton Salt Mine at Fairport Harbor Ohio was discussed by LARRY SULAK while DAVID WINN talked on the Harvard Purdue Wisconsin effort in the Silver King Mine Utah MARVIN MARSHAK and RICHARD STEINBERG described respectively the Soudan Mine Minnesot and the Homestake Mine South Dakot experiments The New Physics Paul Davies,P.
