The Granular State: Volume 627 Surajit Sen, Melany L. Hunt, 2001-04-09 These 38 papers from the April 2000 symposium study granular structure granular flows nonlinear waves in granular media vibrated and rotated granular media and stress distributions Topics include jamming in liquids and granular materials nuclear magnetic resonance studies of granular flows the blueprint of a concept for a nozzle free inkjet printer mixing and segregation processes in a Turbula blender persistence of granular structure during die compaction of ceramic powders and humidity induced cohesion effects in granular media c Book News Inc

Challenges In Granular Physics Thomas Halsey, Anita Mehta, 2003-01-09 This book contains accounts of state of the art approaches to the physics of granular matter from a widely interdisciplinary and international set of experts in the field The authors include theorists such as S F Edwards J Krug and J Kurchan the book is also unique in reporting current experimental approaches with importantly a detailed account of new techniques It will serve as an invaluable handbook for all researchers both novice and experienced who wish to get quickly directed to open questions in key aspects of this challenging and topical domain

Theory of the Spread of Epidemics and Movement Ecology of Animals V. M. (Nitant) Kenkre, Luca Giuggioli, 2021-01-28 Exploiting powerful techniques from physics and mathematics this book studies animal movement in ecology with a focus on epidemic spread Pulmonary syndrome is not only feared in epidemics of recent times such as COVID 19 but is also characteristic of epidemics studied earlier such as Hantavirus The Hantavirus is one of the book s central topics Correlations between epidemic outbreaks and precipitation events like El Ni o are analyzed and spatial reservoirs of infection in off period of the epidemic known as refugia are studied Predicted traveling waves of infection are successfully compared to field observations Territoriality in scent marking animals is presented with parallels drawn with the theory of melting The flocking and herding of birds and mammals are described in terms of collective excitations For scientists interested in movement ecology and epidemic spread this book provides effective solutions to long standing problems

Memory Functions, Projection Operators, and the Defect Technique V. M. (Nitant) Kenkre, 2021-04-13 This book provides a graduate level introduction to three powerful and closely related techniques in condensed matter physics memory functions projection operators and the defect technique Memory functions appear in the formalism of the generalized master equations that express the time evolution of probabilities via equations non local in time projection operators allow the extraction of parts of quantities such as the diagonal parts of density matrices in statistical mechanics and the defect technique allows solution of transport equations in which the translational invariance is broken in small regions such as when crystals are doped with impurities These three methods combined form an immensely useful toolkit for investigations in such disparate areas of physics as excitation in molecular crystals sensitized luminescence charge transport non equilibrium statistical physics

vibrational relaxation granular materials NMR and even theoretical ecology This book explains the three techniques and their interrelated nature along with plenty of illustrative examples Graduate students beginning to embark on a research project in condensed matter physics will find this book to be a most fruitful source of theoretical training

High-temperature Ordered Intermetallic Alloys IX Joachim H. Schneibel, 2001 *Multiple Impacts in Dissipative Granular Chains* Ngoc Son Nguyen, Bernard Brogliato, 2013-07-06 The extension of collision models for single impacts between two bodies to the case of multiple impacts which take place when several collisions occur at the same time in a multibody system is a challenge in Solid Mechanics due to the complexity of such phenomena even in the frictionless case This monograph aims at presenting the main multiple collision rules proposed in the literature Such collisions typically occur in granular materials the simplest of which are made of chains of aligned balls These chains are used throughout the book to analyze various multiple impact rules which extend the classical Newton kinematic restitution Poisson kinetic restitution and Darboux Keller energetic or kinetic restitution approaches for impact modelling The shock dynamics in various types of chains of aligned balls monodisperse tapered decorated stepped chains is carefully studied and shown to depend on several parameters restitution coefficients contact stiffness ratios elasticity coefficients linear or nonlinear force indentation relation and kinetic angles that depend on the mass ratios The dissipation and the dispersion of kinetic energy during a multiple impact are mandatory modelling and are quantified with suitable indices Particular attention is paid to the ability of the presented laws to correctly predict the wave effects in the chains Comparisons between many numerical and experimental results are shown as well as comparisons between four different impact laws in terms of their respective abilities to correctly model dissipation and dispersion of energy
