Galaty,Charles Watkinson,2007-03-14 Archaeological knowledge is not created in a vacuum and our understanding of the past is profoundly affected by political ideologies In fact a relationship between politics and archaeology develops to some degree in every nation regardless of social and economic circumstances The connections between politics and archaeology become most visible however within a totalitarian dictatorship when a dictator seeks to create and legitimize new state supported ideologies Any dictator may attempt to control and exploit the past often by directly controlling archaeologists The degree to which a nation s archaeological system may continue to be affected after the fall of the dictator depends upon both the previous regime s ideological position and its level of dependence upon archaeology and the response of archaeologists to the regime collectively and individually Archaeology Under Dictatorship demonstrates that the study of archaeology as it evolved under modern dictatorships is today more than ever of critical importance For example in many European countries those who practiced archaeology under dictatorship are retiring or dying In some places their intellectual legacy is being pursued uncritically by a younger generation of archaeologists Now is the time therefore to understand how archaeologists have supported and sometimes subverted dictatorial political ideologies In studying archaeology as practiced under totalitarian dictatorship that most harsh of political systems light is shed on the issue of politics and archaeology generally This volume aims to provide a theoretical basis for understanding the specific effects of totalitarian dictatorship upon the practice of archaeology both during and after the dictator s reign The nine essays explore experiences from every corner of the Mediterranean from the heartlands of Italy Spain and Greece to the less well known shores of Albania and Libya With its wide range of case studies and strong theoretical orientation this volume is a major advance in the study of the history and politics of archaeology The Mediterranean focus will also make it thought provoking reading for classical archaeologists and historians      Greece Michael Carroll,2017-08-30 If in the library of your house you do not have the works of the ancient Greek writers then you have a house with no light George Bernard Shaw There is so much in the modern world which has its origins in Greece most notably language and literature As Shelley once said We are all Greeks This small rugged sea girt country has the longest written history in Europe Her myths and legends so deeply embedded in Western consciousness and her sublime landscapes so infused with history have been muse for writers artists and travellers for millennia Travelling from Athens to the scattered islands of the Ionian and Aegean seas the words of literary titans in the West echo through the

centuries from Homer and Plato to Byron Flaubert and Twain Henry Miller to John Fowles the Durrells to Patrick Leigh Fermor and Cavafy Kazantzakis and Seferis Their luminous portraits of Greece poignant provocative always entertaining enrich our own experiences of the country and shed light on a dramatic and often tragic past *Approaches to the Archaeological Heritage* Henry Cleere,1984-08-16 This book undertakes a comparative study of the history and development of legislative and administrative systems in operation today for the protection of archaeological monuments With the exception of Scandinavia and the United Kingdom no country adopted a positive policy towards the protection and conservation of its archaeological and historical heritage until the twentieth century Moreover it was not until the middle of that century under the threat of wholesale devastation from extensive schemes for social and economic development that the accelerating disappearance of the sites and monuments of Antiquity became the object of intensive study and legislation Since then systems of cultural resource management have developed throughout the world A range of countries from Europe America Asia and Africa representing a diversity of political and ideological systems capitalist socialist and ex colonial have been selected as being broadly representative of the variety of these systems The case studies have been written by distinguished archaeologists and provide critical evaluations of the objectives and shortcomings of these systems Bulletin - Museums of Art and Archaeology, University of Michigan University of Michigan. Dyson,2016-11-11 In *Ancient Marbles to American Shores* Stephen L Dyson uncovers the history of classical archaeology in the United States by exploring the people and programs that gave birth to

archaeology as a discipline in this country He puts aside the common formula of chronicling great digs great discoveries and great men in favor of a cultural ideological and institutional history of the subject The book explores the ways American contact with the monuments of Greece and Rome affected the national consciousness It discusses how the spread of classical style laid the groundwork for the development of the discipline after the Civil War and examines the period before World War I when most of the institutions that led to the establishment of the discipline as well as the first generation of American classical archaeologists were created It looks at the role classical archaeology played in the development of the American art museum since the later nineteenth century and considers changes in American classical archaeology from World War II to the mid 1970s Filling the void of information on the history of classical archaeology in the United States this lively book is a valuable contribution to literature on a subject which is enjoying ever increasing interest and attention     Sources for Ancient History Michael Crawford, Emilio Gabba, Fergus Millar, Anthony M. Snodgrass, 1983-11-17 If a scholar wishes to create a picture of a topical society in all its aspects there is little of what he needs to know that he cannot know although there may still be much that he cannot understand For the history of Greece and Rome there is a great deal that is simply unknowable From the end of the archaic age of Greece there is an unbroken sequence of works by Greek and later Roman historians down to the end of antiquity Their vision and range of interest were often limited and much of what they produced has been lost Some help may be derived from the documentary material supplied in antiquity material that was the product of officials organising public activities or heads of families organising their affairs or individuals leaving their mark on the world Beyond this the evidence of archaeology and numismatics may also be helpful The four essays in this book set out to characterise the nature of the ancient literary tradition the inscriptional material the archaeological and numismatic evidence and to explain how and for what purposes they may be used
