**Getting a Grip on Gravity** Mark F Dennis, 2019-10-27 The big question was and still is what causes the moon to be attracted to the earth and the earth to the sun and the sun to our galaxy Why don't they just fly off into space What attracts us and everything else to the earth Why aren't we slung off with the speed of the earth's rotation being faster than the speed of sound at the equator Even with Albert Einstein's general theory of relativity where he explains geometrically how gravity works a century ago these questions are still being asked today

**The Pillars of Creation** Martin Beech, 2016-12-28 This book explores the mechanics of star formation the process by which matter pulls together and creates new structures Written for science enthusiasts the author presents an accessible explanation of how stars are born from the interstellar medium and giant molecular clouds Stars produce the chemicals that lead to life and it is they that have enabled the conditions for planets to form and life to emerge Although the Big Bang provided the spark of initiation the primordial universe that it sired was born hopelessly sterile It is only through the continued recycling of the interstellar medium star formation and stellar evolution that the universe has been animated beyond a chaotic mess of elementary atomic particles radiation dark matter dark energy and expanding spacetime Using the Milky Way and the Eagle Nebula in particular as case studies Beech follows every step of this amazing process
