Our Human Herds: The Theory of Dual Morality (Second Edition, Unabridged) Stephen Martin Fritz, 2019-05-14 Let us imagine that somewhere in present day South America a nation exists as the United States was constituted in 1789 George Washington is its president and Thomas Jefferson its secretary of state It is a nation that allows only white males to vote and its president cabinet officials and many of its citizens own slaves If the America of 1789 existed right now what would we think of it Would it be right to invade it in order to liberate its people Would we consider a complete embargo of it until it changed its ways Would it be a pariah among nations Or would we recognize and cooperate with it declaring its president and secretary of state political geniuses Maybe we would just do nothing and trust that in 100 or so years it will straighten itself out What would be the correct way to think of such a nation and its leaders Three hundred years ago if a woman was raped and became pregnant we'd kill the rapist and spare the baby Today we spare the rapist and kill the baby One hundred years ago only heterosexual marriages were legal Today political leaders around the world are celebrating gay relationships How and why does our moral outlook change in such matters By the time you are done reading this book you will have concrete answers to these questions and many more This is a learned thoroughly researched study and dazzlingly bright The effervescent approach to writing makes its pages fly by Studies as brilliant as this one deserve a far wider audience An engrossing and mind expanding examination of morality Kirkus Reviews

The Consciousness' Drive Charles Cole, 2018-09-18 What is the uniquely human factor in finding and using information to produce new knowledge Is there an underlying aspect of our thinking that cannot be imitated by the AI equipped machines that will increasingly dominate our lives This book answers these questions and tells us about our consciousness its drive or intention in seeking information in the world around us and how we are able to construct new knowledge from this information The book is divided into three parts each with an introduction and a conclusion that relate the theories and models presented to the real world experience of someone using a search engine First Part I defines the exceptionality of human consciousness and its need for new information and how uniquely among all other species we frame our interactions with the world Part II then investigates the problem of finding our real information need during information searches and how our exceptional ability to frame our interactions with the world blocks us from finding the information we really need Lastly Part III details the solution to this framing problem and its operational implications for search engine design for everyone whose objective is the production of new knowledge In this book Charles Cole deliberately writes in a conversational style for a broader readership keeping references to research material to the bare minimum Replicating the structure of a detective novel he builds his arguments towards a climax at the end of the book For our video game video on demand times he has visualized the ideas that form the book's thesis in over 90 original diagrams And above all he establishes a link between information need and knowledge production in evolutionary psychology and thus bases his arguments in our origins as a species how we humans naturally think and how we naturally search for new information because our consciousness drives us to need it
