combining two bi or higher functional monomers One contains two or more isocyanate functional groups and the other contains two or more hydroxyl groups More complicated monomers are also used The Polyurethanes are among the most recent additions to the many commercially important classes of polymers Urethanes can be considered esters of the unstable carbamic acid or amide esters of carbonic acid A polyamide is a polymer containing monomers of amides joined by peptide bonds They can occur both naturally and artificially examples being proteins such as wool and silk and can be made artificially through step growth polymerization or solid phase synthesis Polyamides are commonly used in textiles automotives carpet and sportswear due to their extreme durability and strength Polyester is a category of polymers which contain the ester functional group in their main chain Natural polyesters and a few synthetic ones are biodegradable but most synthetic polyesters are not Polyester fibres are produced by the melt spinning process Raw materials are heated to a spinning mass which is then pressed through spinnerets Manufacturing techniques are now developed to the point where they can produce fibres adapted to suit the widest possible applications they can have round oval or angular profiles making them firm to the touch Applications of these polymers are in various fields like rubber industry textile industry chemical industries etc Some of the fundamentals of the book are epoxy curing system background process conditions polyether polyols with epoxy resins highlights of the technological achievement laminates comprising a hard foam layer and a fiber reinforced synthetic resin layer highlights of the technological achievement process conditions plastic deformation modification of amino polyols with epoxy resins producing expanded and cured polyester resin foamed unsaturated polyester resins with gel coat cross linked polyester unsaturated polyester compositions with high impact strength foam crystallization of condensation polymers acrylate rubber modification of aromatic polyesters etc The present book covers processes of expanded plastics polyurethane polyamides with other related information required by an entrepreneur This book is very useful for technocrats researchers entrepreneurs and professionals TAGS Polyurethane Foam Business Polyurethane Industry Polyamide Business Polyamide Industry Polyester Fiber Business Polyepoxides and Epoxy Resins Polyether Polyols With Epoxy Resins Polyamides and Polyimides Producing Expanded and Cured Polyester Resin Foamed Unsaturated Polyester Resins With Gel Coat Unsaturated Polyester Compositions With High Impact Strength Polyolefins Processing Flexible Polyurethane Foam Stabilization of Flame Retardant Premix Flame and Smoke Retardant Non Shrinkable Polyurethane Foam Foam Preparation Methods Polyol R Flexible Foam Preparation Rigid Foam Preparation Reclamation of Products Formulation of Flexible Polyurethane Foam Reinforced Foamed Resin Structural Material Odorant Hydrophilic Foam Compositions Reinforced Polyurethane Foams Making Castings of Thermosetting Polyurethane Materials Continuous Production of Foamed Polyethylene Films Closed Cell Foamed Films and Sheets Types of Polyamide Compositions Polyamide Polyester Blends Allied Chemical Process Eastman Process Firestone Process Teijin Process Toyo Rayon Process Vinyl Modified Polyamides Esso Process Inventa Process Polycondensation Composite Yarn Production Integrated Polyester
