Birkhoff-James Orthogonality and Geometry of Operator Spaces Arpita Mal, Kallol Paul, Debmalaya Sain, 2024-02-19 This book provides an insight into the geometric aspects of the spaces of operators studied by using the notion of Birkhoff James orthogonality. It studies the norm attainment set of an operator and its properties, the notion of which plays a very important role in the characterization of B J orthogonality of operators. The structure of the norm attainment set is studied for Hilbert space operators and is yet to be understood completely for operators between Banach spaces. The book explores the interrelation between B J orthogonality in the ground space and in the space of operators in its fullest generality. The book further explores the concept of approximate B J orthogonality and investigated its geometry both in the ground space as well as in the space of operators. It highlights important geometric properties like smoothness and k smoothness of bounded linear operators, extreme contractions and symmetricity of bounded linear operators defined between Hilbert spaces as well as Banach spaces.

Howard Williams, Lachlan MacKinnon, 2004-06-22 This year marked the coming of age of the British National Conference on Databases with its 21st conference held at Heriot Watt University Edinburgh in July 2004. To mark the occasion the general theme of the conference was When Data Is Key reflecting not only the traditional key awarded on a 21st birthday but also the ever growing importance of electronic data management in every aspect of our modern lives. The conference was run as part of DAMMS Data Analysis Manipulation Management and Storage Week which included a number of co located and complementary conferences and workshops including the 2nd Workshop on Teaching Learning and Assessment in Databases TLAD2 the BNCOD BioInformatics Workshop and the 1st International Conference on the Future of Consumer Insight Developments in Retail Banking. The aim of this co location was to develop synergies between the teaching research and commercial communities involved in all aspects of database activities and to use BNCOD as a focus for future synergies and developments within these communities. Although this is entitled the British National Conference on Databases BNCOD has always had an international focus and this year more than most with the majority of the papers submitted and accepted coming from outwith the UK.

Sigal,2006-11-15 **Mathematical Scattering Theory** Dmitri_Rael_evich I_Afaev,2010-03-10 The main subject of this book is applications of methods of scattering theory to differential operators primarily the Schrodinger operator There are two different trends in scattering theory for differential operators The first one relies on the abstract scattering theory The second one is almost independent of it In this approach the abstract theory is replaced by a concrete investigation of the corresponding differential equation In this book both of these trends are presented The first half of this book begins with the summary of the main results of the general scattering theory of the previous book by the author Mathematical Scattering Theory General Theory American Mathematical Society 1992 The next three chapters illustrate basic theorems of abstract scattering theory presenting in particular their applications to scattering theory of perturbations of differential operators with constant coefficients and to the analysis of the trace class method In the second half of the book direct methods of scattering theory for differential operators are presented After considering the one dimensional case the author returns to the multi dimensional problem and discusses various analytical methods and tools appropriate for the analysis of differential operators including among others high and low energy asymptotics of the Green function the scattering matrix ray and eikonal expansions The book is based on graduate courses taught by the author at Saint Petersburg Russia and Rennes France Universities and is oriented towards a reader interested in studying deep aspects of scattering theory for example a graduate student in mathematical physics **Advances in Algebraic Quantum Field Theory** Romeo Brunetti,Claudio
