

Comprehensive Guide to International Pricing Strategies and Ethical Business Practices

One World Price (Law of One Price)

The economic principle that identical goods should sell for the same price worldwide when considering exchange rates, transaction costs, and market barriers, although local factors often cause price differences.

The law of one price posits that in an efficient market, identical goods should trade at the same price globally once adjustments for currency conversion, transportation costs, tariffs, and other barriers are made. This principle relies on the existence of **arbitrage opportunities**—where traders buy low in one market and sell high in another—helping to enforce price uniformity across borders.

However, in reality, local market conditions such as consumer preferences, taxes, tariffs, and logistical costs often prevent perfect price equalization. For example, a product might sell at different prices in two countries due to tariffs or differing demand levels.

The relationship between the law of one price and **purchasing power parity (PPP)** is fundamental; PPP suggests that exchange rates should adjust so that the same basket of goods costs the same in different countries, aligning with the law of one price. Nonetheless, deviations occur frequently due to market imperfections, transaction costs, and government interventions.

In practice, arbitrage plays a crucial role in maintaining the law of one price by exploiting price differences, but factors such as market barriers and transaction costs often cause persistent disparities.
